- ❖ Students will be acquainted with the concepts and laws of Human Development.
- ❖ Students will understand and apply psychological principles to personal, social and organisational issues.
- ❖ Students will get an insight into one's own and others behaviour and mental processes and apply effective Strategies for self management and self improvement.
- ❖ Students will understand and apply basic research methods including research design, data analysis and interpretations.

Course Outcomes

B.A. I Year

Major Paper I: Personality Development

- Students will gain knowledge of personality.
- Students will learn to implement coping strategies for better adjustment
- Students will develop skills to enhance self- esteem self-regulation and self-presentation
- Acquisition of life skills based on happiness and positive thinking.
- Students will learn the skills of SWOC communication time and stress management for their life

Major Paper I Practical : Report Presentation

- Students will learn to evaluate their strength, weaknesses, opportunities and challenges.
- Students will develop ability to enhance their personality through applications of communications skills, time and stress management.

Major Paper II / Minor/Elective : Introduction to Psychology

- To develop knowledge and skill in life through learning principle.
- Learn to apply technique of memory improvement in everyday life.
- Learn to gain self regulation for quality of life.
- Acquisition of life skills through motivation.

Major Paper II Practical / Minor/Elective : Introduction to Psychology

On the completion of this course, learners will be able to:

- Students will learn to apply practical application of psychological concept of attention, learning and emotions.
- Students will develop the skills of memory improvement.
- Students will acquire the knowledge of achievement motivation in their life.
- Students will learn to evaluate SWOC.
- Students will develop ability to enhance their personality through applications of communication skills, time and stress management.

B.A. II Year

Major Paper I: Psychopathology (Theory)

- Students will be able to critically assess the information related to the study of behaviour and mental processes.
- Students will gain knowledge about causes, types, and prevention of abnormal behaviour.
- Students will be able to compare biological, psychological and social views of abnormal behaviour.
- Students will be able to utilize the acquired knowledge in the area of specific learning disabilities.

Major Paper I: Psychopathology (Practical)

- Students will be able to critically assess the information related to the study of behaviour and mental processes.
- Students will gain knowledge about causes, types, and prevention of abnormal behaviour..

Major Paper II / Minor/Elective: Guidance and Counselling Psychology (Theory)

- Students will gain knowledge of nature and process of counselling along with the difference between guidance and counselling.
- Students will develop skills of counselling for solving the problems of clients in different areas.

Major Paper II / Minor/Elective: Guidance and Counselling Psychology: (Practical)

- Student will gain knowledge of nature and process of counselling along with the difference between guidance and counselling.
- Student will develop skills of counselling for solving the problems of clients in different areas.

Class- B.A. III Year

Paper I: Social Psychology

- To explain the concept of social identity and why it is important to human behaviour.
- To define social comparison and summarise how people use it to define their self concepts and self esteem.
- To explore the impact of the labelling bias, self labelling and internalised prejudice on people self concepts.

Paper II: Psychological Research and Statistics

- To understand the meaning and types of psychological researches.
- To collect the data and present them in proper graphical representation.
- To solve the statistical problems related to research process.
- To be able to describe and construct a good psychological test.

Practical Outcomes

- The student will get to understand the practical aspect of psychology and will also be able to measure the psychological traits by using standardised tools with minimum errors.
- Students will follow the steps of scientific methods for research work .
- Students will control the variables used in psychological problem.
- Students will use experimental methods to find the cause and effect relationship of psychological problems.
- Students will understand how control groups play an essential role in psychological experiments.

- Students will learn to compare their results with manual or standard results.

(ix) Department of Sociology

Program Specific Outcomes

- ❖ The programmer seeks to develop in student the sociological knowledge and skills that will enable them to think critically and imaginatively about society and social issues.
- ❖ Better understanding of real life situation. The ability to apply sociological concepts and theories to the real world and ultimately their everyday lives.
- ❖ Sociological understanding: The ability to demonstrate sociological understanding of phenomena for example how individual biographies are shaped by social structures
- ❖ Better Understanding of real life situation: The ability to apply sociological concepts and theories to the real world and ultimately their everyday lives.
- ❖ Observation powers: a sensible observation power is necessary to identify the research problems in field study so a perception about human society slowly grows up.

Course Outcomes

B.A I Year

Major Paper I : Indian Society and Culture

- This paper is expected to bring familiarity among student about Indian Society. It will present a Comprehensive integrated and empirical profile of Indian society. It is supposed that the structure and processes operative in the society. The changing agents operating in Indian society presented in this paper will also enable student to gain a better understanding of their own situation and region.
- Get an impression about the basic composition of Indian society. Its historical moorings basic philosophical foundations of the society and the institutions.
- The student will have extensive comprehension of Indian traditions and the opportunity to explore and express them.
- They will also learn in detail about the three layers of Indian society namely “Aranyak Lok Gramya and Nagar”
- After reading this course the student will be able to understand and strengthen local regional employment avenues

Major Paper II / Minor/ Elective: Basic Concepts of Sociology

- The course is designed to incorporate all the key concepts of Sociology which would enable the learner to develop keen insight to distinguish between the common sense knowledge and Sociological knowledge

- The conceptual learning of Society, Social group, Social structure, Social institution ect,will help students in their day to day living.
- By studying this paper students will get information about various employment opportunities in government, corporate, N.G.O. and self-employment sector.

B.A. II Year

Major I: Basic Concepts of Social Research (Theory)

- This paper will help in developing research insight among the students. They will learn about the nature of scientific method and the way to attain value neutrality.
- It will teach students about the importance of reality and the ways to obtain objective and reliable information.
- It will develop reading, writing and reasoning skills among the students.

Major II/Minor/Elective: Social Change and Development (Theory)

Social change is inevitable, hence learning about human society is incomplete without comprehension of change.

- This paper is designed to give the student an extensive knowledge about social change and its overall impact on society.
- This paper will introduce the students with the concept, various factors, processes and theories of social change.
- It will also give them knowledge about the concept of development and its consequence.

B.A III Year

Paper I : Sociological Thinkers

On completion of the course, the student will be able to

- To clarify and broaden, the student's knowledge about the theoretical and methodological contributions of the classical contributions to the subject and the contemporary relevance of these theory.
- Appreciation of the classical concept and theories to develop awareness of the limit of current knowledge.

Paper II : Methods of social Research

On completion of the course, the student will be able to

- Introduces the sociological research both from the theoretical and methodological perspective. They understand the importance of the research in social science.
- To develop the ability to evaluate the methodological validity of the claims made by theory.

(B) Faculty of Computer Science & Application

(II) BCA(Bachelor of Computer Applications)

Program Specific Outcomes

The primary objective of this program is to provide a foundation of computing principles and business practices for effectively using/managing information systems and enterprise software. It helps students analyze the requirements for system development and exposes students to business software and information systems.

At the end of the Program, students will be able to:

- ❖ Understand the concepts of key areas in computer science.
- ❖ Analyze and apply latest technologies to solve problems in the areas of computer applications.
- ❖ Apply technical and professional skills to excel in business.
- ❖ Communicate effectively in both verbal and written form.
- ❖ Develop practical skills to provide solutions to industry, society and business.
- ❖ Job roles include Web Development, Software/ Application development, Software Engineer, Software Tester, System Analyst , Business Analyst to name a few.
- ❖ Provide IT based services in the public domain.
- ❖ Work in a team/group for execution of projects.
- ❖ Pursue higher studies - MCA/ M.Sc.-CS/IT/ MBA/ MS(IT).

Course Outcomes

Class – BCA I Year

Major I : Computer Fundamentals, Organization and Architecture

After the successful completion of this course, student will be able to do the following:

- Understand the basic structure, operation and characteristics of digital computer.
- Design simple combinational digital circuits based on given parameters.
- Understand the working of arithmetic and logic unit.
- Know about hierarchical memory system including cache memories and virtual memory.
- Know the contributions of Indians in the field of computer architecture and related technologies.

Major I Lab: Computer Fundamentals and Digital Lab

After the successful completion of this course, student will be able to do the following:

- Familiarity with parts of the computer and peripheral devices used with the computer.
- Realization of the basic logic and universal gates.
- Verify the behavior of logic gates using truth tables.
- Implement Binary-to -Gray, Gray-to -Binary code conversions.

- Design half and full adder circuit using basic gates.
- Design and construct flip flops and verify the excitation tables.

Major II: Programming Methodology & Data Structures

After the successful completion of this course, student will be able to do the following:

- Develop simple algorithms and flow charts to solve a problem with programming using top down design principles.
- Writing efficient and well-structured computer algorithms/programs.
- Learn to formulate iterative solutions and array processing algorithms for problems.
- Use recursive techniques, pointers and searching methods in programming.
- Will be familiar with fundamental data structures, their implementation; become accustomed to the description of algorithms in both functional and procedural styles.
- Have knowledge of complexity of basic operations like insert, delete and search on these data structures.
- Possess ability to choose a data structure to suitably model any data used in computer applications.
- Assess efficiency tradeoffs among different data structure implementations.
- Implement and know the applications of algorithms for searching and sorting.
- Know the contributions of Indians in the field of programming and data structures.

Major II Lab: Programming Methodology & Data Structures Lab

After the successful completion of this course, student will be able to do the following:

- Develop simple algorithms and flow charts to solve a problem with programming using top down design principles.
- Writing efficient and well-structured computer algorithms/programs.
- Learn to formulate iterative solutions and array processing algorithms for problems.
- Use recursive techniques, pointers and searching methods in programming.
- Possess ability to choose a data structure to suitably model any data used in computer applications.
- Implement and know the applications of algorithms for searching and sorting etc.

Minor: Operating System

After the successful completion of this course, student will be able to do the following:

- Describe the importance of computer system resources and the role of operating system in their management policies and algorithms.
- Specify objectives of modern operating systems and describe how operating systems have evolved over time.
- Understand various process management concepts and can compare various scheduling techniques, synchronization, and deadlocks.
- Describe the concepts of memory management techniques.
- Identify the best suited process management technique for any process.
- Describe various file operations, file allocation methods and disk space management.
- To understand and identify potential threats to operating systems and the security features to guard against them.
- Learn to operate the Linux system.

Minor Lab: Operating System Lab

After the successful completion of this course, student will be able to do the following:

- Operate the Linux system.
- Do administration
- Use Vi Editor

Elective: Discrete Mathematics

After the successful completion of this course, student will be able to do the following:

- Apply the Boolean algebra, switching circuits and their applications.
- Minimize the Boolean function using Karnaugh Map.
- Understand the lattices and their types.
- Graphs, their types and applications in study of shortest path algorithms.
- Test whether two given graphs are isomorphic.
- Understand the Eulerian and Hamiltonian graphs.
- Represent graphs using adjacency and incidence matrices.
- Understand the discrete numeric functions, generating functions and Recurrence Relations.

Vocational: Web Designing

After the successful completion of this course, student will be able to do the following:

- Code a handful of useful HTML & CSS examples
- Build semantic, HTML & CSS webpage
- Write basic scripts
- Use Names, Objects and Methods
- Add interactivity to a Web page.
- Create Dynamic Web pages using Java Script in HTML forms.

Class – BCA II Year

Major I: Data Communication and Computer Networks

After the successful completion of this course, student will be able to do the following:

- Demonstrate the Basic Concepts of Networking, Networking Principles, Routing Algorithms, IP Addressing and Working of Networking Devices.
- Demonstrate the Significance, Purpose and application of Networking protocols and Standards.
- Describe, compare and contrast LAN, WAN, MAN, Intranet, Internet, AM, FM, PM and Various Switching Techniques.
- Explain the working of Layers and apply the various protocols of OSI & TCP/IP model.
- Analyze the Requirements for a Given Organizational Structure and Select the Most Appropriate Networking Architecture and Technologies.
- Design the Network Diagram and Solve the Networking Problems of the Organizations with Consideration of Human and Environment. Install and Configure the Networking Devices.

Major I Lab: Computer Networks Lab

After the successful completion of this course, student will be able to do the following:

- Learn and identify various cables used in the networking.
- Learn, identify various connectors used to connect different cables.
- Use the various tools for preparing the connectors for cables.
- Configure and manage various local area networks at home and at work place.

Major II: Database Management Systems Using PL/SQL

After the successful completion of this course, student will be able to do the following:

- Explain the features of database management systems and relational database.
- Design conceptual models of a database using ER modelling for real life applications and construct queries in relational algebra.
- Create and populate a RDBMS for a real-life application, with constraints and keys, using SQL.
- Retrieve any type of information from a database by formulating complex queries in SQL.
- Analyse the existing design of a database schema and apply concepts of normalization to design an optimal database.

Major II Lab: DBMS Using PL/SQL Lab

After the successful completion of this course, student will be able to do the following:

- To create database & views
- Execute simple & advance SQL queries
- Use DBMS tools in the areas of database applications.

Minor: Internet Application using Java Programming

After the successful completion of this course, student will be able to do the following:

- Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs.
- Read and make elementary modifications to Java programs that solve real-world problems.
- Validate input in a Java program.
- Design and use basic applet for web page

Minor Lab: Java Programming Lab

After the successful completion of this course, student will be able to do the following:

- Develop simple applications of java.
- Implementation and use of conditional statement.
- Learn to formulate iterative solutions and array processing algorithms for problems.
- Learn to implement method overloading and overriding.
- Implementation of inheritance and interface in java.
- Develop a small applet program using awt.

Elective: E-Commerce

On the completion of this course student will be able-

- To learn the fundamentals of E-Commerce and its process.

- To understand the role of E-Commerce in the present scenario along with the concepts of security and its applications.
- To gain knowledge of e-commerce business needs and resources and match to technology considering human factors and budget constraints.
- To apply knowledge of changing technology on traditional business models and strategy.
- To have skills to Communicate effectively and ethically using electronic communication.

Vocational: Web Development using PHP & MySQL

After the successful completion of this course, student will be able to do the following:

- Discover how the web works, what makes websites work.
- Implement simple and impressive design from basics to advanced – so as to focus on goal oriented and user centric designs.
- Use Server-Side Scripting.
- Implement concept of data persistence.
- Apply skills to program logic using PHP and handle data using MySQL.
- Develop dynamic websites using PHP & MySQL.

Class – BCA III Year

Paper I: Computer Networks, Internet Tech. & Security

After studying this subject, students will be able to –

- Grasp basics of computer network technology.
- Understand Data Communications System and its components.
- Identify the different types of network topologies and protocols.
- Differentiate the layers of the OSI model and TCP/IP.
- Use the different types of network devices and implement their functions.
- Apply the mechanism of subnetting and routing mechanisms.
- Understand the security threats and protection policies.

Paper II: Core Java

After studying this subject, students will be able to–

- Implement Object Oriented programming concepts using basic syntaxes of control Structures, strings and function for developing skills of logic building activity.
- Identify classes, objects, members of a class and the relationships among them needed for a finding the solution to specific problem
- Demonstrate how to achieve reusability using inheritance, interfaces and packages and describes faster application development can be achieved.

Paper III: Management Information Systems

After studying this subject, students will be able to –

- Relate the basic concepts and technologies used in the field of management information systems.
- Compare the processes of developing and implementing information systems.

- Understand the role of the ethical, social, and security issues of information systems.
- Demonstrate the role of information systems in organizations.

Paper IV: Python Programming

After studying this subject, students will be able to –

- Interpret the fundamental Python syntax and semantics and be fluent in the use of Python control flow statements.
- Express proficiency in the handling of strings, functions and file handling.
- Determine the methods to create and manipulate Python programs by utilizing the data structures like lists, dictionaries, tuples and sets.
- Articulate the Object-Oriented Programming concepts such as encapsulation, inheritance and polymorphism as used in Python with class, modules and packages.
- Identify the commonly used operations involving database connectivity and use of tkinter for GUI programming.

Paper V: E-Governance

After studying this subject, students will be acquainted with –

- The concept of e-government technology, importance and its impact.
- Understanding of difference between the models of development of e-government services, and choosing the best according to situation.
- Skills to Identify the main challenges in storing huge online government data storage and retrieval.
- Recognition of various laws, principles and policies to protect e-government services to avoid possible threats that may hinder the developments of online services.
- The case studies of running projects of India and neighbouring countries, to develop effective and efficient e-government projects.

Paper VI: Principles and Practices of Management

After studying this subject, students will be able to –

- Recognize the importance of marketing in an organization, how marketing relates to other business functions, and the role of marketing in society at large.
- Do basic secondary research relative to marketing in an organization (e.g., by using Internet search engines, such as Yahoo, Google, etc.)
- Select, analyze and define a target market for a selected product or service.
- Develop a marketing plan or strategy for a product or service (e.g., company objectives, marketing objectives, target market(s), advertising, pricing, distribution, product/ service development, evaluation of competitors, contingency plans, budget, etc.)
- Evaluate/analyze the marketing strategy for an existing product and/or services. Know the basic marketing concepts and theories.

Paper VII: Project - Application Development using PHP & MySQL Outcomes

Upon successful completion students should be able to:

- Installation of LAMP/XAMPP/WAMP module according to requirement of platform.
- Write PHP code to produce outcomes and solve problems.

- Display, insert, update and delete data using PHP and MySQL.
- Handle images and files in MySQL uploaded via PHP.
- Test, debug, and deploy web applications containing PHP and MySQL.

(C) Faculty of Commerce

(III) B.Com(Bachelor of Commerce)

Programme Specific Outcomes

- ❖ Learners will be able to prove proficiency with the ability to engage in competitive exam like C.A., C.S., ICMA etc.
- ❖ Learner will acquire the skills like effective communication, Decision making, Problem solving in day to day business affairs.
- ❖ Students can acquire practical skills to work as Tax Consultant, Audit Assistant, and other financial supporting services.
- ❖ After completing three years of B.Com program, students would gain a thorough grounding in the fundamentals of commerce.
- ❖ The students get the practical exposures which would equip them to face the modern day challenges in commerce.
- ❖ To build a strong foundation of knowledge in different areas of commerce.
- ❖ To develop the skill of applying concepts and techniques used in commerce.
- ❖ To develop an attitude for working effectively and efficiently in a business environment.
- ❖ To expose students about entrepreneurship.
- ❖ To enable a student to be capable of making decisions at personal and professional.

Department of Commerce

Course Outcomes

B.Com I Year

Major Paper I: Financial Accounting

- Acquire conceptual knowledge of basics of accounting.
- Identify event that need to be recorded in the accounting records.
- Equip with the knowledge of accounting process and preparation of in an accounts of sole trader.
- Identify and analyze the reasons for the difference between cash book and pass book balances.

Major Paper II: Business Regulatory Framework

- The outcome of this course is to provide the students with practical legal knowledge of general business law issues.
- To understand the Essentials of A valid contract.
- The laws of the Act, consideration and the various modes of discharge of a contract to explain the various laws with regards to the sale of goods and performance of a sale contract and remedial measures to familiarize the students with the various law with regards to consumer protection in India and the functions of various consumer forums and,

- To understand the meaning and the various legislations with regards to the cyber laws.

Minor : Business Organization and Communication

- The basics of the business and will be able to imbibe how any business can be organized successfully.
- That chapter's related communications shall be able to elucidate how communication plays an important role in modern business scenario.

General Elective: Business Economics

- Understand how households (demand) and businesses (supply) interact in various market structures to determine price and quantity of a goods produced.
- Represent demand, in graphical form, including the downward slope of the demand curve and what shifts the demand curve.
- Understand the links between production costs and the economic models of supply.
- Understand the concept of pricing.

B.Com II Year

Major Paper I: Corporate accounting

After completion of the course, learners will be able to:

- An understanding of the regulatory environment in which the companies are formed and operate.
- A Solid foundation in accounting and reporting requirements of the corporations Act and Accounting Standards.
- Describe the rationale, merits and demerits of issuing bonus shares for a company.
- Prepare financial statements (Profits & Loss Account, Balance Sheet, etc.) using online software.
- Analyze the case study of major amalgamations of companies in India.
- Describe the process of e-filing of annual reports of companies.

Major Paper II: Cost accounting

This subject of cost accounting is very important to make the student of commerce subject self-reliant, students from its study

- know the principles, concepts, benefits, utility of cost accounting
- In the event of setting up your own industry, being self-sufficient in cost accounting, you will be able to acquire knowledge of the methods of material issue, control and labor payment.
- Will be expert in finding out unit cost, finding tender price, finding contract cost and finding profit
- develop decision making ability through marginal cost analysis, standard cost analysis.
- Will be able to get employment as a cost analyst in small, big business houses.

Minor: Business Statistics

At the end of the course, students should be able to:

- Develop the ability to analyze and interpret data to provide meaningful information to assist in management decision making activities;
- Apply a basic knowledge of statistics to business disciplines;
- Apply appropriate graphical and numerical descriptive statistics for different types of data;
- Apply probability rules and concepts relating to discrete and continuous random variables to answer questions within a business context;
- Explain and interpret a variety of hypothesis tests to aid decision making in a business context;
- Use simple/multiple regression models to analyze the underlying relationships between the variables.

Elective I: Principle of Management

On having completed this course student should be able to:

- Demonstrate understanding of the role of managers in an organization
- Summarize the elementary concepts, principles and theories of management
- Examine the managerial functions having an impact on the organizational effectiveness
- Identify the contemporary issues and challenges in management
- Develop ethical workplace practices.
- Appraise the sources of influence to inspire the actions of other organizational members and evaluate the best control methods.

B.Com. III Year

Accounting Group

Paper I: Income Tax Law & Practice

- To introduce the basic concept of income tax.
- It helps to build an idea about income from salaries, house property, business profession, capital gains and other sources as a concept.
- It gives more idea about the deductions u/s 80 and how to compute tax liability and about the filling of returns.

Paper II: Goods and Service tax & Custom Duty

- Providing exposure of basics of Goods and Service tax & Custom Duty .
- The students become aware about the custom duty, G.S.T.
- Management Group

Paper I: Management Accounting

- Introduction of management accounting compare difference between cost accounting and management accounting.
- Students will understand the meaning of ratio, their importance and limitations.

Paper II: Auditing

- The students will be well equipped with various auditing techniques such as vouching, verification of assets etc.
- The students will be in a position to apply the knowledge in practical auditing work of various business organizations.

Applied Economics Group(B)

Paper I: Principles of Marketing

- Students will also learn about marketing strategy preparation and selling skills of sales personnel.
- Students will be able to deal with the day to day affairs of business, marketing, advertising etc.
- Sell products to various customer markets, as well as learn various ways to promote a company's products and services.

Paper II: International Marketing

- It gives the fundamental understanding of marketing concepts and marketing policies across the

world.

- It helps in acquiring comprehensive theoretical practical competencies in international marketing.
- It develops the understanding of the challenges of business environment.
- After the successful completion of the course the student should have a complete knowledge on Indian Banking System.

Department of Computer Application

Program Specific Outcomes

On the Completion of the program, students will gain a strong foundation of knowledge in different areas of Commerce and Computer Application courses. The student will be able to pursue higher education and take-up jobs in the field of Commerce and Computer Applications. The program develops an attitude for working effectively and efficiently in a business environment. At the end of the Program, students will be able to:

- ❖ Graduates will be able to develop strong understanding of core Commerce and Computer Application courses.
- ❖ Able to take up challenging career options in Commerce and IT sector.
- ❖ Motivated to pursue higher education.
- ❖ Gain updated knowledge to take up employment.
- ❖ Become ethically and socially responsible commerce graduates with computer application knowledge.
- ❖ Pursue higher studies – MCom / MCM/MSW/ CA/ MBA/PGDCA.

Course Outcomes

Class – B.Com. (Computer Application) I Year

Generic Elective: M.S. Office

On the completion of this course student will be able -

- To Create and manage professional documents using word.
- Analyze, manage and present data using excel.
- Create and manage presentation using power point.
- To insert a table, picture, or drawing into the document.
- To Prepare the document to be sent as a circular letter.

Vocational: Web Designing

After studying this Course, the student will be able to –

- Code a handful of useful HTML & CSS examples
- Build semantic, HTML & CSS webpage
- Write basic scripts
- Use Names, Objects, and Methods

- Add Interactivity to a Web Page
- Create Dynamic Web Pages using Java Script in HTML forms.

Class – B.Com II Year

Generic Elective: Computer Maintenance & Troubleshooting

On the completion of this course student will be able to -

- Identify and understand the hardware components in the computer system.
- Install, configure and update operating systems, device drivers and softwares.
- Install, configure and maintain various components in computer system and peripheral devices.
- Diagnose faults, repair and maintain computer system and its peripherals.
- Do preventive maintenance of computer system and its peripherals.

Vocational: Web Development using PHP & MySQL

After studying this Course, the student will be able to –

- Discover how the web works, what makes websites work.
- Implement simple and impressive design techniques, from basics to advanced – so as to focus on goal oriented and user centric designs.
- Use Server-Side Scripting.
- Implement concept of data persistence.
- Apply skills to program logic using PHP and handle data using MySQL.
- Develop dynamic websites using PHP & MySQL.

Class – B.Com III Year

Paper I: Web Designing

After studying this subject, students will be able to –

- Use basic HTML tags.
- Create Table, Frames, Forms.
- Create and use various types of CSS.
- Designing web pages.
- Understand the concepts of Web Publishing

Paper: II Digital Marketing

After studying this subject, student will be able to –

- Evaluate and apply key concepts related to digital marketing.
- Demonstrate the role of digital marketing in business strategy.
- Understand the importance of Search Engine Optimization (SEO).
- Set up Google Analytics account and add Analytics code in a website.

(D) Faculty of Science

(IV) B.Sc. (Bachelor of Science)

B.Sc. (Physical Science)

Program Specific Outcomes

- ❖ Students will learn to think in a critical manner.
- ❖ Students will develop the proficiency in acquisition of data using variety of laboratory instruments and in the analysis and interpretation of such data.
- ❖ Student should learn how to design and conduct an experiment (or series of experiment) demonstrating their understanding of scientific method and process.
- ❖ Students are also expected to have an understanding of the analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
- ❖ Students will learn the applications of numerical techniques for modelling physical systems for which analytical methods are inappropriate or of limited utility.
- ❖ Describe the methodology of science and relationship between theory and observation.
- ❖ Analyze physical problems and develop, correct solutions using natural laws.

(i) Department of Chemistry

Program Specific outcomes

The Program enables the students

- ❖ To understand basic facts and concepts in Chemistry including atomic structure, periodic properties, Chemistry of different elements, thermodynamics, chemical kinetics, electrochemistry, aromaticity, electrophilic & nucleophilic substitutions reaction mechanism in organic compounds and chemistry of biomolecules.
- ❖ Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
- ❖ Students will be able to explain the central role of chemistry in our society and will be able to handle social, economic, and environmental issues.
- ❖ Make aware and handle the sophisticated instruments /equipment's.
- ❖ Students will be able to clearly communicate the chemistry related topics.
- ❖ Learn handling of apparatus and chemicals properly.

Course Outcomes

B.Sc. I Year

Major I : Fundamentals of Chemistry

The students will be able to understand:-

- Chemical techniques used in Ancient India
- Various theories and principles applied to reveal Atomic structure.
- Significance of quantum numbers
- Basic understanding of periodic properties of elements

- Theories related to chemical bonding
- Acid base concepts, pH and buffer
- Factors responsible for reactivity of organic molecules.
- Concept and mechanism of chemical kinetics
- Properties of electrolytes

Major I Practical : Qualitative and Quantitative chemical analysis

The students will learn the following aspects:-

- Importance of chemical safety and lab safety while performing experiments in laboratory
- Qualitative inorganic analysis.
- Elemental analysis of organic compounds (non instrumental).
- Qualitative identification of functional group of organic compounds.
- Techniques of pH measurements
- Preparation of buffer solution

Major II/Minor :Analytical Chemistry (paper II)

The students will be able to understand:-

- Basic concepts of mathematics for chemists.
- Fundamentals of analytical chemistry and steps involved in analysis.
- Basic knowledge of computer for chemists
- Basic concepts of chemical equilibrium
- Principles of chromatography and chromatographic techniques
- Various techniques of spectroscopic analysis

Major II/Minor - Practical II Analytical Chemistry

The students will learn the following aspects:-

- Concepts and analytical methods in chemistry
- Preparations of solutions of different concentration
- Standardization of the solution
- Identification of components by chromatographic techniques
- Analysis by spectral techniques

B.Sc. II year

Major- I Reactions, Reagents and Mechanism in Organic Chemistry –

By the end of this course students will acquire the knowledge of following aspects of chemistry:

- Various organic reactions, reagents and their mechanisms which will be helpful in understanding organic synthesis.
- Application of the reactions in the various industries like pharmaceutical, polymer, pesticides, textile, dyes etc.
- Important key reactions used in further study and research work.

Major- I Organic Qualitative analysis, Reactions, and Synthesis –

By the end of this course students will acquire the knowledge of following practical aspects of chemistry:

- To perform various reactions, which will be helpful in understanding in organic synthesis.
- To use reagents to perform organic reactions.
- To prepare various organic compounds.
- To use chromatographic techniques to monitor organic reactions.
- Applications of reactions in the industries, example pharmaceutical, polymer, pesticides, textile, dyes etc. industries.
- These experiments will also be useful in further studies and research work.

Major- II Transition Elements, Chemi-energetics Phase Equilibria -

By the end of this course students will learn the following aspects of chemistry:

- Introductory idea about Traditional Indian Chemistry.
- Chemistry of d- & f- block Elements, Basic Concepts of Coordination Chemistry.
- Stereochemistry of Transition Metal Complexes.
- Laws of Thermodynamics.
- Concepts of Phase Equilibrium with reference to Solid Solution, Liquid-liquid Mixtures, Partially Miscible Liquids.
- Basic Concepts of Electrochemistry.

Major II/ Minor- Metal Complex Preparation, Thermochemistry & Phase equilibrium experiments (Practicals)

By the end of this courses students will learn the following aspects of laboratory exercises of Chemistry.

- Preparation of inorganic complexes.
- Use of the calorimeter for thermochemistry experiments.
- Determination of enthalpy of various systems and reactions.
- Experiments on phase equilibria.
- Construction of phase diagrams.
- Study of reaction equilibrium.

B.Sc. III Year

Paper- I Physical Chemistry-

The students will be able to:

- Explain the basic concepts of UV spectroscopy
- Understand the interactions of Electromagnetic Radiations with different matter and their applications like- Infrared Spectroscopy, Raman, UV-Visible, NMR spectroscopy.
- Understand elementary idea of quantum mechanics.
- Molecular orbital theory
- Explain laws of photochemistry
- Understand the physical properties i.e. optical activity, polarization & magnetic properties and structure of molecules.

Paper- II Inorganic Chemistry

The students will be able to:

- Classify acid & bases as hard & soft, Pearson's concept of HSAB & its applications.
- Describe Inorganic polymers-Silicones and phosphazenes.
- Understand metal ligand bonding in transition metal complexes and their thermodynamic and kinetic aspects.
- Know the importance of essential and trace elements in biological processes.
- Understand the magnetic properties, magnetic moment and electronic spectra of complexes.

Paper- III Organic Chemistry

The students will be able to:

- Develop the skills to recognize and draw particular carbohydrate structure.
- Know about the classification and structure of amino acids, nucleic acid, fats, oils and Detergents and their importance in life.

- Understand the synthesis, structure and bonding in organometallic and organo-sulfur compounds.
- Understand the Pericyclic reactions and their classification.
- Explain the basic principle of NMR spectra.

Practical Outcomes:

The students will be able to:

- Learn laboratory practices, handling glassware, equipment & reagent carefully.
- Prepare Standard solutions of different concentration.
- Learn to perform common laboratory techniques like distillation, reflux, recrystallization, TLC, Paper chromatography.
- Verification of Lambert-Beer's law, stoichiometry of complex formation by Job' & Mole ratio method using colorimeter.
- Separate the binary organic mixture and identify the components.
- Estimation of Ba and Cu ions in sample by gravimetric method.
- Identification of various ions including interfering radical present in water and mixture of salts.
- Synthesis of simple organic and inorganic compounds/complexes.

(ii) Department of Computer Science

Programme Specific outcomes

- ❖ On the Completion of the program the students gain strong foundation of knowledge in different areas of Computer Science.
- ❖ The student will be able to pursue higher education and take-up jobs in the field of Computer Science.
- ❖ The program Develops proficiency in the practice of computing.

Course Outcomes

Class – BSc I Year

Major I: Computer System Architecture

On completion of this course, learners will be able to:

- Understand the basic structure, operation and characteristics of digital computer.
- Be able to design simple combinational digital circuits based on given parameters.
- Familiarity with working of arithmetic and logic unit as well as the concept of pipelining.
- Know about hierarchical memory system including cache memories and virtual memory.
- Understand concept and advantages of parallelism, threading, multiprocessors and multicore processors.
- Know the contributions of Indians in the field of computer architecture and related technologies.

Major I Lab - Computer Architecture Lab

On completion of this course, learners will be able to:

- Realization of the basic logic and universal gates.
- Verify the behavior of logic gates using truth tables.
- Implement Binary-to -Gray, Gray-to -Binary code conversions
- Design half and full adder circuit using basic gates.
- Design and construct flip flops and verify the excitation tables.

Major II / Minor/ Elective - Programming Methodologies & Data Structures

On completion of this course, learners will be able to:

- Develop simple algorithms and flow charts to solve a problem with programming using top down design principles.
- Writing efficient and well-structured computer algorithms/programs.
- Learn to formulate iterative solutions and array processing algorithms for problems.
- Use recursive techniques, pointers and searching methods in programming.
- Will be familiar with fundamental data structures, their implementation; become accustomed to the description of algorithms in both functional and procedural styles
- Have knowledge of complexity of basic operations like insert, delete, search on these data structures.
- Possess ability to choose a data structure to suitably model any data used in computer applications.
- Design programs using various data structures including hash tables, Binary and general search trees, heaps, graphs etc.
- Assess efficiency tradeoffs among different data structure implementations.
- Implement and know the applications of algorithms for searching and sorting etc.
- Know the contributions of Indians in the field of programming and data structures.

Major II Lab /Minor/ Elective Lab - Office Tools & Programming Methodology Lab

On completion of this course, learners will be able to:

- Develop simple algorithms and flow charts to solve a problem with programming using top down design principles.
- Writing efficient and well-structured computer algorithms/programs.
- Learn to formulate iterative solutions and array processing algorithms for problems.
- Use recursive techniques, pointers and searching methods in programming.
- Possess ability to choose a data structure to suitably model any data used in computer applications.
- Implementation of algorithms for searching and sorting.

Class – BSc II Year

Major I: Computer Networks & Information Security

On completion of this course, learners will be able to:

- Define and describe the components of Data Communications System such as various protocols, OSI Model, data transmission in analog and digital format.
- Identify and differentiate among the network devices and drivers.

- Learn and describe various error detection and correction methods. Define the various terminologies used in Network and Application layers.
- Compare the various network technologies and can decide the suitable technology installation as per requirement and environment at any work place.
- Describe the various protocols and can identify the application areas of each protocol.
- Know the fundamentals of network and information security issues, laws, and various security technologies which can be applied on work place.

Major I Lab - Computer Networks Lab

After completing this lab course, students will be able to:

- Learn and identify various cables used in the networking.
- Learn, identify various connectors used to connect different cables.
- Use the various tools for preparing the connectors for cables.
- Configure and manage various local area networks at home and at work place.

Major II / Minor/ Elective – Object Oriented Programming with Java

On completion of this course, learners will be able to:

- Implement Object Oriented programming concept using basic syntaxes of control Structures, strings and function for developing skills of logic building activity.
- Identify classes, objects, members of a class and the relationships among them needed for finding the solution to a specific problem.
- Demonstrates how to achieve reusability using inheritance, interfaces and packages and describes faster application development can be achieved.
- Demonstrate understanding and use of different exception handling mechanisms and concepts of multi-threading for robust faster and efficient application development.
- Identify and describe common abstract user interface components to design GUI in Java using Applet & AWT along with response to events.
- Identify, Design & Develop complex Graphical user interfaces using principal Java Swing classes based on MVC architecture.

Major II Lab /Minor/ Elective Lab – Java Programming Lab

After completing this lab course, students will be able to:

- Implement Object Oriented programming concept using basic syntaxes of control structures, strings and function for developing skills of logic building activity.
- Identify classes, objects, members of a class and the relationships among them needed for finding the solution to a specific problem.
- Demonstrates how to achieve reusability using inheritance, interfaces and packages and describes faster application development can be achieved.
- Demonstrate understanding and use of different exception handling mechanisms and concepts of multi-threading for robust faster and efficient application development.
- Identify and describe common abstract user interface components to design GUI in Java using Applet & AWT along with response to events.

- Identify, Design & Develop complex Graphical user interfaces using principal Java Swing classes based on MVC architecture.

Class – BSc III Year

Paper I: Database Management System

After studying this subject, student will be acquainted with –

- Understanding of data models and schemas in DBMS
- Usage of SQL- the standard language of relational databases.
- Knowledge of functional dependencies and design of the database.
- Implementation of normalization on databases.

Paper II: Operating System Concepts

After studying this subject, student will be acquainted with –

- Functioning of OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS.
- Understanding of the process management policies and scheduling of processes by CPU.
- Idea of Mutual exclusion, Deadlock detection in Distributed operating system.
- Various techniques of resource management, process management and scheduling.
- Implementation of Memory management policies and virtual memory.
- Commands and working environment of UNIX/Linux OS.

(iii) Department of Mathematics

Program Specific outcomes

- ❖ Students are expected to acquire knowledge in areas of mathematics such as algebra , trigonometry , differential equations , vector analysis and geometry , Real analysis , Complex Analysis , Linear Algebra
- ❖ Students are expected to develop critical thinking.
- ❖ Formulate and develop mathematical arguments in logical manner.
- ❖ Acquire good knowledge of subject and to use it in various problems arising in other disciplines.
- ❖ Able to recognise , learn and appreciate the importance of life long learning process.

Course Outcomes

Class: B.Sc . I year

Major Paper I: Algebra, Vector Analysis and Geometry

The students will be able to

- Recognize consistent and inconsistent systems of linear equations by the row echelon form of the augmented matrix, using the rank of matrix.
- To find the Eigen value and corresponding Eigen vectors for a square matrix.
- Use the knowledge of vector calculus in geometry.

Major Paper II/Minor/Elective : Calculus and Differential Equations

The students will be able to

- Gain a substantial understanding about what Calculus is and why it is important branch in mathematics.
- Provide an insight to the standard concepts of ordinary differential equations.
- Strengthen the students' problem solving skills by using tools of calculus and differential equations.

Class: B.Sc. II year

Major Paper I: Abstract Algebra and Linear Algebra (Theory)

The course will enable the students to:

- Recognize the algebraic structures as a group, and classify them as abelian, cyclic and permutation groups, etc.
- Link the fundamental concepts of groups and symmetrical figures.
- Analyze the subgroups of cyclic groups.
- Explain the significance of the notion of cosets, normal subgroups, and quotient groups.
- The fundamental concept of rings, fields, subrings, integral domains and the corresponding morphisms.
- Analyse whether a finite set of vectors in a vector space is linearly independent. Explain the concepts of basis and dimension of a vector space.
- Understand the linear transformations, rank and nullity, matrix of a linear transformation, algebra of transformations and change of basis.
- Compute the characteristic polynomial, eigenvalues, eigenvectors, and eigenspaces, as well as the geometric and the algebraic multiplicities of an eigenvalue and apply the basic diagonalization result.

Major Paper II/Minor / Elective : Advanced Calculus and Partial Differential Equations

The course will enable the students to:

- Understand many properties of the real line \mathbb{R} and sequences.
- Calculate the limit superior, the limit inferior, and the limit of a bounded sequence.
- Apply the mean value theorems and Taylor's theorem.
- Apply the various tests to determine convergence and absolute convergence of an infinite series of real numbers.

- Formulate, classify and transform partial differential equations into canonical form.

Class: B.Sc. III Year

Paper I : Linear Algebra & Numerical Analysis

The students will be able to

- Understand the basic concept of linear algebra
- Develop a background and skills to solve complicated mathematical problems in a new approach using numerical techniques

Paper II : Real & Complex Analysis

The students will be able to.

- Understand the basic concepts of real numbers and metric spaces

Identify and construct complex differentiable functions and study their properties

Paper III : Discrete Mathematics

The student will be able to

- Simplify Boolean expressions
- Basic concepts of relations on sets
- Fundamentals of graph theory.

(iv) Department of Physics

Program Specific outcomes

- ❖ Students are expected to acquire core knowledge in Physics including major premises of Mathematical Physics, Mechanics, Properties of Matter, Special Theory of Relativity, and Earlier development in physics – Contribution of Scientist, Thermodynamics, Statistical Physics, Optics, Electrostatics, Magneto statics, Electrodynamics, Quantum Mechanics, Spectroscopy, Nuclear Physics, Solid State Physics and Devices.
- ❖ Students are expected to develop a written and oral communicating skill in communicating physics related topics.
- ❖ Students will realize and develop an understanding of Physics and Science on Society.
- ❖ Students should learn how to conduct series of experiments to understand scientific process, interpret and analyze results, draw conclusions as supported by their data.
- ❖ Learn to minimize errors and recognize the limitations of equipment's.
- ❖ Realizing the application of Physics concepts in other disciplines.
- ❖ Apply conceptual understanding of Physics to general real-world situations.

Course Outcomes

Class: B. Sc. I

Major I : Thermodynamics and statistical Physic

- The course would enable the students to understand the basis Physics of heat and temperature in relation to energy, work, radiation and matter.
- The students are expected to learn that “how laws of thermodynamics are used in a heat engine to Transform heat into work”.
- This course will also develop an understanding of the various concepts of statistics and the methods to apply them in thermodynamics.
- Students will understand the importance of studying statistical mechanics with the behaviour of Particles under classical and quantum conditions.

Major I Lab : Thermodynamics and statistical Physic Lab

- The students would gain practical knowledge about heat and radiation by performing various experiments
- The students will acquire knowledge about the different forms of a distribution of subatomic particles in the system using statistical methods.
- The students will be able to use various thermodynamical instruments in daily life

Major II/Minor/ Elective :Mechanics and General Properties of Matter

- The course would empower the students to develop the Idea about the Behaviour
- of physical bodies.
- It will provide the basic concepts related to the motion of all the objects around
- us in daily life.
- The students would be able to build foundation to various applied field in

- science and technology especially in the field of mechanical engineering.
- The students will acquire the knowledge of basic mathematical methods to solve the various problems in physics.
- The students will be able to understand the relativistic effect and the relation between energy and mass.

Major II/Minor/ Elective Lab : Mechanics and General Properties of Matter Lab

- The students would acquire basic practical knowledge related to mechanics through the experiments.
- Students will be familiar with various measurement devices by which they can measure various physical quantities with accuracy.
- The students will develop the concept related to the mechanics and properties of matter

Class: B.Sc. II

Major I : Wave and Optics

After the Completion of the course, the Student should be able to:

- Develop an understanding of various aspects of harmonic oscillations and waves specially superposition of collinear and perpendicular harmonic oscillations.
- Explain several phenomena of daily life that can be explained as wave phenomena.
- Understand various optical phenomena, principles, working and applications.
- Use the principle of wave motion and superposition to explain the Physics of polarization, interference and diffraction.

Major II/Minor/ Elective: Electricity Magnetism and Electromagnetic theory

After the Completion of the course, the student should be able to

- Understand the basic concepts of electricity and magnetism and their applications.
- Apply various network theorems and their applications in electronics, electrical circuit analysis, and electrical machines.
- Understand the construction and working of ballistic Galvanometer and Cathode Ray Oscilloscope.
- Understand the concept of electromagnetic waves and their reflection and refraction from a plane surface.

Major I : Wave and Optics Lab (practical)

After the Completion of the course, the student should be able to

- Study waves and their superposition using cathode ray oscilloscope.
- Explain various optical properties like interference, diffraction and polarization.
- Use various optical instruments like telescope, grating, spectrometer, polarimeter etc. In daily life.

Major II/Minor/ Elective : Electricity Magnetism and EMT Lab (Practical)

After the Completion of the course, the student should be able to

- Verify various laws in electricity and magnetism such as Lenz's law, Faraday's law.
- Understand the construction, working and uses of Various measuring instruments.
- Verify various network theorems, using simple electric circuits.

Class: B.Sc. III Year

Paper I: Quantum mechanics and Spectroscopy

- Learn the mathematical tools needed to solve quantum mechanics problem (Complex functions and Operators).
- To build connections between mathematical development and conceptual understanding.
- Develop and communicate analytical skills in subatomic physics and to develop an interest in this subject .

Paper II: Solid State Physics and Devices

- Understand basic concept of Solid State Physics.
- Conceptual gain of crystalline structure.
- Working of Solid State Electronic Devices and to understand their uses.
- Exposure to basic knowledge of Nanotechnology

Practical Outcomes

- Students will learn to do practical's as an application of what they study in theory.
- Students will also learn how to use measuring instruments and minimize errors, compare results with standard results.
- Students will apply various methods of calculations such as graphical etc.
- Explore the important connections between theory, experiments and current applications.
- Students will develop the proficiency in acquisition of data using a variety of laboratory instruments and in the analysis and interpretation of such data.
- Develop a basis for future learning and work experience.
- Students have to perform experiments based on their some of the theory part such as mechanics, properties of matter, statistical probability, heat, optics, electricity and magnetism, crystal structure, electronics, nuclear physics etc.

B.Sc.(Life Science)

Program Specific Outcomes

- ❖ The faculty of Science (Bio Sciences) offers following subjects at the UG level Zoology, Botany, Chemistry, Biotechnology and Microbiology which includes theory as well as practicals.
- ❖ The students interested in Biological Science can pursue multi and inter-disciplinary science careers in future.
- ❖ It helps to develop scientific temper beneficial for the society and also contributes in the scientific developments of the nation.
- ❖ Students can pursue their career in diverse fields including both public and private sectors.
- ❖ Science graduates can serve in industries, establish their own industrial unit or startups.
- ❖ Bio-.Science graduates apply their broad knowledge of science across a range of fields, with in-depth knowledge in at least one area of study, while demonstrating an understanding of the local and global contexts in which science is practiced.

(i) Department of Biotechnology

Program Specific outcomes

- ❖ Biotechnology is a field of applied biology that involves the use of living organisms and bioprocesses in engineering, technology, medicine and other fields.
- ❖ Biotechnology being a multidisciplinary field is in great demand because of its various applications in the field of research and development. The advantage of studying this degree course is that the candidate can further pursue higher studies in specialized fields of sciences i.e. Biotechnology, Microbiology, Biochemistry, Molecular Biology, and Genetics etc.
- ❖ An introduction to the fundamentals of Biotechnology will be an asset for the performance of the students in near future. The objective of the department is to promote safe implication of technology by keeping in mind the ethical standards and to develop human resource to meet the growing demand for biotechnologists in the field of food, agriculture, medicine and environment management.
- ❖ The course involves both theory and practical courses where in emphasis is laid on the knowledge content (based on the topics in the curriculum), utility value (their application in real life) and current scenarios etc. There is ample number of opportunities for the students of Biotechnology in the field of medical and veterinary sciences, pollution control and waste management.

Course Outcomes

CLASS : B.Sc. I Year

Major I : Cell Biology and Biochemistry

- Understand basic of cell biology.
- Appreciate the importance of bonding and spatial arrangements of molecules for proper functioning and stability.
- Understand both the physical as well as chemical properties of the biomolecules
- The student could pursue a career in biochemical testing. The decrease or increase in the amount of some of the biomolecules can have clinical significance.
- Student can also go in for medical laboratory Technique Courses opening opportunities in hospitals

and pathological laboratories.

Major I Lab: Work for Cell Biology and Biochemistry

- Understand basic techniques of cell biology.
- Know the physical as well as chemical properties of biomolecules
- pursue a career in biochemical testing. The decrease or increase in the amount of some of the biomolecules can have clinical significance.
- Take medical laboratory Technique Courses opening opportunities in hospitals and pathological laboratories.

Major II: Microbiology and Immunology

- Microbial diversity and nutrition.
- Immune system, its properties and types.
- Immunoglobulin structure types and functions and can apply the concept of hypersensitivity and vaccination for different disease
- Perform various immunological techniques

Major II Lab: On Microbiology and Immunology

On completion of this course learners will be able to have sufficient scientific understanding of microbiology and immunology.

- Students apply concept Principle and type of sterilization methods viz performing microbiological experiments.
- Students apply the concept and characteristics of antiseptic disinfected and their mode of action in day-to-day life.
- Students will apply principle, working and application of instruments Laminar airflow, Autoclave, Hot air oven etc.

CLASS : B.Sc. II Year

Major I: Basic Molecular Biology (Theory)

Course Learning Outcome:

1. Students will be able to explain role of different protein/enzyme involved in cell signaling.
2. They will be able to understand mechanism of genetic damage caused by mutation and role of various repair system in neglecting the effect of these mutation.
3. Students will be able to explain mechanism of DNA replication, transcription, translation and other related process

Major I Practical

Course Learning Outcome:

1. Students will be able to explain role of different protein/enzyme involved in cell signaling.
2. They will be able to understand mechanism of genetic damage caused by mutation and role of various repair system in neglecting the effect of these mutation.
3. Students will be able to explain mechanism of DNA replication, transcription, translation and other related process

Major II: Recombinant DNA Technology (Theory)

Course Learning Outcome:

1. The objectives of this course are to teach students with various approaches to conduct genetic engineering and their application in biological research as well as in biotechnology industries.
2. Genetic engineering is a technology that has been developed based on our fundamental understanding of the principles of molecular biology and this reflected in the contents of this course.
3. Given the impact of genetic engineering in modern society, the students should be endowed with strong theoretical knowledge of this technology.
4. Is conjunction with the practical in molecular biology and genetic engineering, the students should be able to take up biological research as well as placement in the relevant biotech industry.

Major II Lab Work for Recombinant DNA Technology (Practical)

Course Learning Outcomes:

- The objectives of this course are to teach students with various approaches to conduct genetic engineering and their application in biological research as well as in biotechnology industries.
- Genetic engineering is a technology that has been developed based on our fundamental understanding of the principles of molecular biology and this reflected in the contents of this course.
- Given the impact of genetic engineering in modern society, the students should be endowed with strong theoretical knowledge of this technology.
- In conjunction with the practical in molecular biology and genetic engineering, the students should be able to take up biological research as well as placement in the relevant biotech industry.

CLASS : B.Sc. III Year

Paper I: Molecular Biology and Genetic Engineering

The objective of this course is to have an insight into mechanism of gene expression and its regulation in prokaryotes and eukaryotes. **Genetic Engineering** allows the students to understand the different technology used in RD, PCR, Electrophoresis etc. Discuss the mechanisms associated with Gene expression at the level of transcription and translation.

- Discuss the regulation of gene expression in prokaryotes and eukaryotes.
- Understand the role of different cells, effector molecules and effector mechanisms in Genetic Engineering. Understand the principles underlying various immune techniques.
- Students will be aware of the modern tools and techniques of genomics and isolation and identification of genes.

Paper II: Applied Biotechnology

- The student will be able to evaluate the potential of biodegradation of organic pollutants, taking microbial and physical/chemical environments, as well as the chemical structure of the compound itself, into consideration.
- Students will gain basic information of Plant tissue culturing, microbial cultures, sterilization methods and enzyme production.
- Students will be able to describe the tools and techniques of genetic engineering, DNA manipulation enzymes and vectors, genome and manipulation tools, gene expression regulation, production and characterization of recombinant proteins.
- Students will be able to explain the industrial aspects of Biotechnology for the production of various of industrial products of biological origin.
- Students will learn about the bio-safety guidelines.

Practical Outcomes

Students will demonstrate proper and safe laboratory practice, proper use of equipment and the ability to use basic Techniques in several areas and advanced Techniques in at least one area.

- Students will demonstrate the ability to perform appropriate qualitative analysis of experimental data and draw valid conclusions from their analysis.
- Students will demonstrate the ability to work effectively with computational, mathematical and statistical approaches to acquire, analyse and model experimental datasets.
- Students will demonstrate the ability to effectively use electronic media to access biological

information.

- Students will demonstrate the ability to orally communicate the findings of their experiments or the work of others.

(ii) Department of Botany

Programme Specific Outcomes

- ❖ The aim of this course is to ensure that you can achieve an up to date level of understanding of plant science.
- ❖ The study of Botany dealing with the structure, function, classification and evolution of plants has inspired many great minds.
- ❖ It is fascinating to study the wide spectrum of reproduction process in algae, fungi, lichens, bryophytes, petridophytes, gymnosperm and flowering plants.
- ❖ A student of Botany has been learning there aspects together with taxonomy, anatomy, plant pathology, plant breeding, microbiology, plant physiology, biochemistry, ecology, genetics, molecular biology and plant biotechnology.

Course Outcomes

Class -B.Sc. I Year

Major I: Applied Botany

- Understood the significance and role of Botany.
- Learnt the basic aspects of applied botany.
- Gained knowledge about employment opportunities in field of botany.
- Gained knowledge about start-up opportunities in the field of botany.
- Learnt about opportunities of social services.
- Gain knowledge about best health practices.

Major I Lab: Applied Botany Practical

- By the end of this course the student should have knowledge of practical skill related with ethnobotany, tissue culture, application of bioinformatics software and tools of recombinant DNA technology.

Major II/Minor/Elective : Basic Botany

- This course will help the student to understand the diversity of plants and evolutionary process in plant kingdoms.
- It gives an accounts of plant adaptations from aquatic condition to colonize terrestrial habitat.
- The changes in morphological, anatomical and reproductive structures that proper plant evolution can be investigated.
- The economic importance and significance of plants in nature will be understood.
- They will be acquainted with locally prevalent microbial diseases of plants and humans.

Major II/Minor/Elective Lab: Basic Botany Practical

- Students will learn to carry out practical work in the laboratory.
- Interpreting plant morphology and anatomy of various groups of lower and higher plants.
- Students will be able to identify the major groups of microorganisms.

Class -B.Sc. II Year

Major 1 Plant Anatomy & Embryology (Theory)

Course Learning Outcome

1. Students will learn the internal structure of plants. It will enhance the basic understanding of organization of plant body by cells and tissues.
2. Students will understand the dynamic mechanism of plant pollination, fertilization and development.
3. They will have hands on training on section cutting, preparation of slides, study of pollen and ovules.

Plant Anatomy & Embryology (Practical)

Course Learning Outcomes (CLO)

- Students will be able to Understand the scope and importance of morphology and anatomy of root shoot and leaf.
- Study of different embryo and endospore.
- Study of flower morphology and inflorescence

Major II/Minor/Elective Industrial Botany (Theory)

Course Learning Outcomes (CLO)

- This course will provide knowledge on plants and their parts used in various industries.
- Students will get an idea to establish plant based natural product industry.
- This course will make the students self-reliant.

Industrial Botany (Practical)

Course Learning Outcomes (CLO)

- Students will be able to recognize different parts of plants used in plant-based Industries.
- This course will provide practical knowledge to establish small or large scale plant based industries.

Class -B.Sc. III Year

Paper I : Plant Physiology & Biochemistry

- Learn and understand water absorption, osmosis, transpiration and ascent of sap.
- Learn and understand mineral nutrition in plants, translocation & structure of Biomolecules.
- Understand the process and importance of photosynthesis.
- Understand the structure of mitochondria & process of respiration.
- Understand the structure & classification of enzymes & plant growth regulators.

Paper II : Cell biology, genetics and Biotechnology

- Understand the structure of cell & cell organelles.
- Understand structural organization, variation in chromosome and DNA structure.
- Understand Mendel's laws of inheritance, cytoplasmic inheritance & mutation.
- Understand the structure of gene, protein synthesis & gene regulation in prokaryotes and eukaryotes.
- Understand the fundamentals of Biotechnology, RDT and Plant Tissue Culture Techniques.

Practical Outcomes

After completion of these experiments students will be able to:

- Learn Preparation of slides and staining of different plant materials.
- Learn diversity in Algae, Fungi, Bryophyta, Pteridophyta and Gymnosperm.
- Learn identification of local plants belonging to different families of angiosperms, their systematic position, morphological characters, floral formula and floral diagram.
- Learn identification of local plant diseases their causal organisms, symptoms and control measures.
- Learn Morphology and anatomy of root, shoot & leaf and their identification.

- Learn more about community ecology by different methods.
- Learn morphological and anatomical adaptation in locally available hydrophytes & Xerophytes.
- Learn different physiological experiments related to Photosynthesis, Respiration & Osmosis
- To understand the plants & plant cell in relation to water.
- Learn cell division in root tips & flower buds.

(iii) Department of Microbiology

Programme Specific Outcomes

Upon completion of B.Sc. Microbiology programme, the students will be able to

- ❖ Use the aseptic techniques to control the microorganism and conduct the process of sterilization.
- ❖ Perform the basic techniques related to screening, isolation and cultivation of microorganisms from various sources.
- ❖ Study the microorganism with regard to morphology, cultural and biochemical characters. It will help to classify the microbes to certain extent.
- ❖ Understand microorganisms and their relationship with the environment.
- ❖ Produce and analyze the microbial products at laboratory level.
- ❖ Conduct the basic research with these microorganisms and perform the diagnostic procedures required in food, milk and pharmaceutical industries.

Course Outcomes

B.Sc. I Year

Major I: General Microbiology and Cell Structure

- Indian traditional knowledge and historical background of Microbiology.
- Structure and transmission of viruses.
- Structure and cell organization of bacteria.
- Different kinds of unicellular prokaryotic and eukaryotic microorganisms based on specific characteristics.
- General characteristics of important Eubacteria.

Major I Lab : Study of Microorganisms

- Isolate various types of bacteria and Yeasts..
- Microscopically examine various types of bacteria, fungi and protozoa.
- Understand structure of important animal, plant and bacterial viruses using electron micrographs.

Major II: Microbial Techniques

- Recall the basic lab glassware to be used in the laboratory.
- Summarize different methods of sterilization and isolation of pure cultures
- Understand the working of different kinds of instruments and microscopes.
- Apply serial dilution technique to isolate the bacteria.
- Practice different methods to culture bacteria in the laboratory.
- Illustrate a method to differentiate between Gram positive and Gram negative bacteria.

Major II Lab: Microbial Tools and Techniques

- Basic knowledge of glassware, microscopes and different kinds of instruments used in the

microbiology laboratory.

- Basic media preparation technique, autoclaving, cleaning and sterilization of glassware..
- Preparation of liquid and solid culture media.
- Isolation of microorganisms by different plating methods.

B.Sc. II Year

Major I Microbial Physiology and Metabolism (Theory)

- Role of various biomolecules.
- Structure and metabolism of Carbohydrates.
- Structure and metabolism of Amino acids and Proteins.
- Mechanism of enzyme action.
- Structure and metabolism of lipids.
- Structure, types and roles of Nucleic Acids.

Major I Lab : Microbial Biochemistry & Metabolism

- Understand the concept of qualitative & quantitative Analysis
- Understand the properties of biomolecule
- Knowledge about Structure of protein, DNA & RNA

Major II Microbial Diversity and Growth (Theory)

- Classify bacteria into groups and their salient characteristics.
- Describe the nutritional requirements of bacteria for growth.
- Understand viruses and viral diseases.
- Know about diversities in Fungi and Algae.
- Develop a basic idea about Protozoa.

Major II Practical

- Define the nutritional requirements of bacteria for growth.
- Understand virus and viral diseases.
- Know about diversities in habitats of fungi and algae.
- Develop a basic idea about Protozoa.

B.Sc. III Year

Paper I: Applied and environmental microbiology

- Upon successful completion of the course, students are expected to be able to:
- Appreciate the diversity of microorganisms and learn the abundance, distribution and significance of microorganism in the environment such as bioremediation and plant microbe interactions.
- Understand the significance and activities of microorganisms in various food and role of intrinsic and extrinsic factors on microbial growth in foods leading to spoilage, and understand the principles underlying the preservation methods.
- Study the different types of microorganisms in milk and their activities.
- Appreciate how microbiology is applied in manufacture of industrial products, learn methods in discovery of new useful microorganisms and acquire knowledge of the design of fermentors and process controls.

Paper II: (Immunology and medical Microbiology)

On completion of this course the student will be able to:

- Identify common infectious agents and the diseases caused by them.
- Understand the salient features of antigen antibody reaction & its uses in diagnostics and various other studies.
- Appreciate the barriers that are used by the host to resist bacterial pathogens, the mechanisms whereby innate (natural) and adaptive (acquired) immunity provide protection against infectious agents, and the role of vaccines in protection of animal hosts from infection.
- To understand about Tumor Immunology and Learn about immunization and their preparation and its importance

Practical Outcomes

The attributes develop in a microbiology graduate after performing practicals in UG course will make them able to:

- Learn various types of media preparation.
- Learn various techniques for isolation of pure cultures.
- Learn the practical skills in microscopy handling and staining techniques.
- Comprehend the various methods for identification of unknown microorganisms.
- Develop basic skills in aseptic techniques.
- Check portability of water and microflora of air.
- Isolate and identify microorganism from laboratory sample.
- Perform MIC of antibiotics.
- ELISA test for disease diagnosis.
- Handle and independently work on lab protocols involving molecular techniques.

(iv) Department of Zoology

Programme Specific Outcomes

- ❖ Students able to understand the basic concepts of taxonomy of animals, cell biology, anatomy, physiology, genetics, ecology, developmental biology and applied Zoology.
- ❖ Identify and list out common invertebrates and vertebrates.
- ❖ Understand the applications of biological sciences in Apiculture, Sericulture, lac culture Aquaculture, Agriculture, medicine and daily life.
- ❖ Gains knowledge about research methodologies.
- ❖ Understand various genetic abnormalities.
- ❖ Perform procedures as per laboratory standards in the areas of Taxonomy, Physiology, Ecology, Cell biology, Genetics, Applied Zoology, Clinical science, tools and techniques of Zoology, Toxicology, Entomology, Nematology Sericulture, Biochemistry, Fish biology, Animal biotechnology, Immunology and research methodology etc.
- ❖ Contributes the knowledge for Nation building.

Course Outcomes

Class : B.Sc. I year

Major I: Animal Diversity: Non-Chordata

- Learn about the importance of systemic, taxonomy and phylogeny to get a concrete idea of evolution of non-chordate phyla.

- Understand the various morphological, anatomical structures and functions of animals of different phyla.
- Get the knowledge about economic, ecological and medical significance of various animals in human welfare.
- Understand the important parasites and their control measures.

Major I Lab: Invertebrata

- Identify invertebrate animals of different phyla and their histology through study of museum specimens and slides.
- Learn their different systems through dissections.
- Enhance collaborative learning and communication skills through practical sessions, team work, group discussions, assignments and projects.

Major II / Elective/Minor: Cell biology, Reproductive biology and Developmental Biology

- Develop deeper understanding of what life is and how it functions at cellular level
- Understand the nature and basic concepts of Cell biology, Reproductive and Developmental biology
- Understand structure and functions of cell membrane and cellular organelles
- Understand the importance of latest reproductive trends, reproductive techniques to be applied for human welfare.
- Understand the general patterns and sequential developmental stages during embryogenesis; and understand how the developmental processes lead to establishment of body plan of multi-cellular organisms.
- Understand about the evolutionary development of various animals

Major II / Elective/Minor Lab: Cytology, Reproductive biology and Embryology

- The different stages of mitotic and meiotic cell division and special types of chromosomes
- Different stages of embryology.
- Through squash preparations understand the stages of cell division and structure of polytene chromosome.
- Enhance collaborative learning and communication skills through practical sessions, team work, group discussion, assignment and project

Class : B.Sc. II year

Major I Diversity of Chordates and Comparative Anatomy (Theory)

Course Learning Outcome

After completion of the course students will able to:

- Understand Chordate diversity of animals and their taxonomic position.
- Identify the morphological and anatomical features and basis of chordate classification.
- Know economic importance and present status that will develop positive towards conservation of biodiversity.
- Differentiate the organism belonging to different taxa by studying comparative anatomy.
- The project, assignment will give them a flavor of research in studying biodiversity, taxonomy besides improving their writing skills and lay foundation of career of Zoology.

Major II/Minor/Elective Physiology and Biochemistry (Theory)

Course learning Outcome

Upon completion of the course students will able to:

1. Understand how organs functions at different levels i.e. from cellular to system levels.

2. Examine internal harmony of different body systems by learning inherent disorders and deficiencies, which is needed to maintain good health.
3. Understand functions of biomolecules & their role in metabolism by studying biochemistry.
4. Develop a strong foundation for research & employability skills.
5. Improve the student's perspective of health biology through deep study of physiology.

Major I Chordate Zoology Lab (Practical)

Course Learning Outcome

On completion of this course, learners will be able to:

1. Identify diversity of Chordates, basics of systematics and hierarchy of different categories.
2. Learn characteristics of different classes of vertebrates, through studying examples (preserved specimens)
3. Gain training experience in anatomy by learning dissection and mounting.
4. Get knowledge how vertebrates organs differ from class to class by comparative study of osteology and histology.
5. Develop flow of research and skills of writing by submitting project report and assignment.

Major II System Physiology and Biochemistry Lab (Practical)

Course Learning Outcome

Upon completion of this course, students will be able to understand:

- The effect of temperature and pH on enzyme activity.
- Qualitative estimation of biomolecules and gain knowledge of their role in our body.
- Various parameters of hematology and know its importance for our healthy life.
- The principle and working of instruments required for performing exercises in laboratory.
- Collaborative learning and communication skills through practical sessions in laboratory.
- Assignment and project writing process which will give them a flow of research.

B.Sc. III Year

Paper I : Genetics

- Develop idea about Mendelian, non-Mendelian inheritance, genetic disorder, gene mutations, linkage, crossing over and sex determination.
- Knowledge of molecular organization and function of DNA and RNA, types of RNA and protein synthesis.
- Impart the knowledge about Human Karyotype, Human Genome Project, Multiple allele and inheritance of blood group, Sex linked and different Genetic diseases in human beings.
- Develop idea about Recombinant DNA technology, DNA fingerprinting and Gene therapy.

Paper II: Ecology and Applied Zoology

- Impart knowledge to the student regarding various factors of ecology, types of ecosystem, population and community characteristics and dynamics.
- Gain knowledge in the areas of animal behavior, wildlife, biodiversity and conservation Biology.
- Understand concepts of aquaculture, sericulture, apiculture, lac culture along with pest management techniques.
- Students are able to maintain the Aquarium.
- Study of types of pollution: Air, water, soil, thermal and noise pollution and their preventive measures.

Practical Outcomes

- Study of fresh water, marine and terrestrial fauna, major carps, Common stored grain pests and vegetable pests.
- Obtained the knowledge about direct observation of fossils and evolutionary important specimen by which evolutionary relationship of animal groups.
- Understood the working, principle and applications of different instruments.

- Attained knowledge on the observation of preserved specimens of fresh water, marine and terrestrial fauna.
- Analyzed water quality like dissolved oxygen, hardness, pH, turbidity etc.
- Studied ecosystem, wild life and life cycle of economically important insects.

Foundation Course

Course Outcomes

Subject : Foundation Course

Class : B.A. / BCA/ B.Com./B.Sc. I Year

Foundation Course I -A: Bhasha aur Sanskriti

- To develop interest in the study classic literary texts
- To develop cultural consciousness and national spirit.
- Knowledge of language.
- To develop an understanding of language and culture through the study of general vocabulary and specialized vocabulary.
- Develop the level of understanding by introducing specific vocabulary.
- Prepare for competitive Exams.

Foundation Course I -B: English Language and Indian Culture

- Prepare for various competitive exams by developing their English language competence.
- Promote their comprehension skills by being exposed to a variety of texts and their interpretations.
- Build and enhance their vocabulary.
- Develop their communication skills by strengthening grammar and usages.
- Inculcate values which make them aware of national heritage and environmental issues, making them responsible citizens.

Foundation Course II -A: Environmental Education

- To understand various aspects of life forms, ecological processes, and the impacts on them by the human during Anthropocene era.
- To build capabilities to identify relevant environmental issues, analyze the various underlying causes, evaluate the practices and policies and develop framework to make informed decisions.
- To develop empathy for all life forms, awareness and responsibility towards environmental protection and nature preservation.
- To develop the critical thinking for shaping strategies such as; Scientific, Social, economic, administrative & legal, environmental protection, conservation of biodiversity, environmental equity and sustainable development.
- To prepare for the competitive exams.

Foundation Course II -B: Yoga

After studying this course student will be able to-

- Develop their own physical, mental, emotional, social and spiritual health.

Class : BA / BCA/ B.Com/B.Sc II Year

Paper I: Hindi Bhasha Aur Naitik Mulya

- The verbal and non-verbal skills of communication are developed.

- Make accurate use of Hindi language in their respective fields.
- Understand the basic forms of story and poetry.

Paper II: English Language and foundation

Through this course the students will be able to:

- Strengthen their Grammar and Vocabulary,
- Acquire and develop LSRW (Listening, Speaking, Reading and Writing) skills
- Learn to think creatively and critically

After the completion of the course, students are expected to gain competency and proficiency in English language to perform at professional and personal level as well as to face competitive examinations at State and National level.

FC II

Paper A : Entrepreneurship Development

This course Introduces the students to the basics of entrepreneurship and small business management. Students gain an understanding of how to establish and manage a small business.

- Helps in building the skills, framework and knowledge of entrepreneurship and new venture creation.
- Helps the students in understand the importance of the planning process and learn how to develop, write and present an effective business plans for a new venture.

Paper B : Women Empowerment

After going through this course, students will be able to understand the following:

1. Understand the history, concept and various dimensions of women empowerment in India.
2. Will be able to understand the constitutional provisions, laws and policies related to women empowerment.
3. Get knowledge of various issues, challenges and agencies supporting women empowerment. With this, you will be able to get acquainted with the glory story of the powerful women leadership of India.

Present study related to women empowerment will provide employment, opportunities to the students in government, private and non-government organizations.

Class : BA / BCA/ B.Com/B.Sc III Year Paper I: Hindi Bhasha Aur Naitik Mulya

- To understand fundamental human values.
- To improve communication and soft skills.
- To make all round personality development.
- To develop their social and moral sense in life.

Paper II: English Language

- To help the students to learn good English to prosper in professional and personal lives.
- To equip with the practical, emotional, intellectual and creative aspects of language by integrating knowledge and skills.
- To make them proficient in drafting C.V., writing E-mails Report etc for their job and other career prospects.
- To expose the students to a range of contexts where the language is used to meet a variety of real life communication needs.
- To develop intellectual, personal and professional abilities through effective communicative skills; ensuring high standard of behavioral attitude through literary subjects and shaping the students socially responsible citizens.
- Students should be proficient in oral communication and writing.

Paper III: Basics of Computer & Information Technology

After studying this subject, student will be acquainted with –

- Identify input & output devices of Computers, their working and understand the hardware, software terminologies.
- Use system functionalities proficiently, solve basic information system problems using office packages.
- Work effectively with a range of Office suites for documentation, calculation, presentation and database handling.
- Apply office automation in practical and demonstrate professionalism.

Open Elective Courses (NEP) For UG

- Introduction to Sociology
- Sociology of Tourism
- MS Office
- Computer Maintenance & Troubleshooting
- Human Right
- Communicative English
- Translation Studies
- Mass Media and Communication Skills
- Fundamentals of Management
- Matrices, Geometry and Vector algebra
- Mathematics Logic and Sets
- Trigonometry, Calculus and Differential Equations
- History of Indian Mathematics & Vedic Mathematics

Introduction to Sociology

- This course will enhance the conceptual learning and understanding of the basic concepts used in Sociology.
- The paper will contribute in enriching the vocabulary and scientific temperament of the students about human society.
- In this course student will get information about employment opportunities related to the discipline of Sociology.
- The course will provide knowledge about socio-cultural processes.

Sociology of Tourism

After studying this course, students will be aware of the concepts of sociology of tourism.

- Able to analyze the National Global impact of tourism.
- Students will be able to understand the importance of tourism culture of the country.
- Students will get a chance to understand the social and cultural image of India.
- This course will give an opportunity to the students to understand the intercultural values.
- Students will learn about Indian heritage and will also realize the need of conservation.

M.S. Office

On the completion of this course student will be able-

- To Create and manage professional documents using word.
- Analyze, manage and present data using excel.
- Create and manage presentation using power point.
- To insert a table, picture, or drawing into the document.
- To Prepare the document to be sent as a circular letter.

Generic Elective: Computer Maintenance & Troubleshooting

On the completion of this course student will be able to -

- Identify and understand the hardware components in the computer system.
- Install, configure and update operating systems, device drivers and softwares.
- Install, configure and maintain various components in computer system and peripheral devices.
- Diagnose faults, repair and maintain computer system and its peripherals.
- Do preventive maintenance of computer system and its peripherals.

Human Rights

- The students will be able to explain the meaning, history and evolution of human rights.
- The students will be able to examine human rights issues in different social, political and cultural contests
- The students will be able to relate human rights with other rights of individuals.

Communicative English

- The study of this course will enable the students to acquire the knowledge of :
- Phonology and Morphology_
- Syntax and Structure
- Vocabulary and Discourse.
- The students will be able to converse in real-life situations with effective language skills. The course will also help them to : • Acquire literary sense,
- Use idiomatic and lexical language.
- Communicate effectively across the globe.

Translation Studies

The course is based on the needs and merits required in translation. The study of this paper will enable the students to:

- Understand the concept of translation studies in the theoretical field.
- Familiarize with approaches to translation, thereby contextualizing the discipline in general terms,
- Understand the process of translation demonstrate and apply enhanced knowledge of English as related to translation practices,
- Achieve effective communication with people from different corners of the world,
- Protect cultural heritage and benefit from transmission of knowledge,
- Understand structural differences between the two languages, and
- Expand the knowledge of the vocabulary and collocational aspects of the target language.

Experiments with Translation

The course is based on the needs and merits required in translation. The study of this paper will enable the students to:

- Develop in understanding and appreciation of translation tactics.
- Critically approach the process of translation with cultural and semantic concerns as focal points.
- Interpret cross-genre translational elements,
- Prepare themselves for employability in the field in the of translation,

- Achieve effective communication with people from different corners of the world,
- Protect cultural heritage and benefit from transmission of knowledge,
- Understand structural differences between the two languages, and

Expand the knowledge of the vocabulary and collocational aspects of the target language

Mass Media and Communication Skills

The course is based on the needs and merits required in mass media. The study of this paper will enable the students to:

- Develop practical and creative skills of mass communication and media,
- Stimulate critical thinking,
- Identify avenues for a career in print and electronic media,
- Keep themselves abreast to the outer world,
- Identify ways to give voice to the voiceless,
- Spread their art and culture among different sections of society,
- Attain managerial efficiency; and
- Develop leadership qualities.

Experiments with Mass Media and Communication Skills(Practical)

The course is based on the needs and merits required in mass media. The study of this paper will enable the students to:

- Learn the skills required in creating advertisements and visualizations for advertising agencies of both the public and private sector,
- Develop the aptitude of vigilance towards language as well as current events in order to work for news agencies
- Understand the technicalities of social media presence
- Spread their art and culture among different sections of society
- Attain managerial efficiency, and
- Develop leadership qualities.

Fundamentals of Management

At the of the course, students should be able to:

- Understand the nature of management and describe the functions of management.
- Develop understanding of different approaches to designing organizational structures.
- Understand the role of personality, learning and emotions at work.
- Discover and understand the concept of motivation, leadership, power and conflict.
- Understand the foundations of group behavior and the framework for organizational change and development.

Matrices, Geometry and Vector algebra

The students will be able to

- Student will be able to use the Matrices, Determinants, Geometry and vector approach in different areas of business and science like budgeting, Sales projection cost estimation analysing the results of an experiment etc.

Mathematics Logic and Sets

The students will be able to

- Using the principles of logic to distinguish between sound and unsound reasoning in discourse of everybody.
- Construct truth tables for logical expression: test statements for logical equivalence and represent mathematical statements in the language of predicate language.
- Using the appropriate set theoretic concepts. Thinking process tool and techniques in the solutions

to various conceptual or real-world problems.

Trigonometry, Calculus and Differential Equations

The course will enable the students to:

- Understand the trigonometrical functions.
- Find out Maxima and minima of various functions.
- Solve simple problems related to real-life-situations.
- Use of differential equations approach in different areas of business and science.
- Formulate the differential equations of first order and first degree for various mathematical problems.

History of Indian Mathematics & Vedic Mathematics

The course will enable the students to:

- Developing the understanding of scopes and features of Vedic mathematics.
- Enhance computational skills.
- Develop analytical thinking through Vedic mathematics.
- Understand the meaning of mathematical sutras in Sanskrit.
- Solve the multiplication by using Vedic sutras.
- Distinguish between modern and Vedic squaring methods and make to simplify algebraic squaring.
- Identify cube and cube roots and understand the concept of division by using straight division.
- Develop the interest of the research in the field of Indian mathematics.

Vocational Courses (NEP)

- Web Designing
- Web Development using PHP & MySQL
- Nutrition and Dietetics
- Management of Nutrition in life cycle
- Medicinal Plants
- Retail Management
- Personality Development

UG I Year: Web Designing

Course Outcomes

After studying this Course, the student will be able to –

- Code a handful of useful HTML & CSS examples
- Build semantic, HTML & CSS webpage
- Write basic scripts
- Use Names, Objects, and Methods
- Add Interactivity to a Web Page
- Create Dynamic Web Pages using Java Script in HTML forms.

UG II Year: Web Development using PHP & MySQL

Course Outcomes

After completion of course, students will be able to -

- Discover how the web works, what makes web sites work.
- Implement simple and impressive design techniques, from basics to advanced so as to focus on goal oriented and user centric designs.
- Use Server Side Scripting.
- Implement concept of data persistence.
- Apply skills to program logic using PHP and handle data using MySQL.
- Develop dynamic websites using PHP & MySQL.

UG I Year :Nutrition and Dietetics

Course Outcomes

After studying this Course, the student will be able to-

- Understand the relationship between food, nutrition & health.
- Understand various function of food & food groups.
- Understand digestion, absorption & functions of various nutrients & their sources.

UG II Year : Management of Nutrition in life cycle

Course Learning Outcomes: -

After completion of course,students will be able to

- Plan diets for early childhood.
- Plan diets for school going children.
- Plan diets for adolescent

- Plan diets for adults
- Plan a diet for pregnancy and lactation.
- Plan a diet for old age.

UG I Year Medicinal Plants

Course Outcomes

Understand importance of balanced diet to reduce diet to reduce risk of deficiency diseases.

- Medicinal Plants
- After Studying this course, the students will be able to understand:
- The utility of plants as medicines.
- The preparation of basic herbal medicinal products.
- The idea of cultivation practices.
- The storage, packaging and marketing of herbal medicines.
- To work with individual plant and plant products

UG II Year : Plants Used In Therapy

Course Learning Outcomes (CLO)

After completion of course, students will be able to :

- Know about different therapies of treatments.
- Identify plant species used in Ayurvedic, Homeopathic, Allopathic, Unani and Ethno medicines.
- Prepare different Asavas, Arishtas, Dermal oils, Mother Tincture, ointments and many other cosmetics..
- Understand importance of Ethnomedicines.
- Prepare cosmetic Ethnomedicines.
- Learn about the utility of plant products for treatments to use them as business.

UG I Year: Retail Management

Course Outcomes

Course Learning Outcomes: -

- Understand the Fundamental Concept of Retail Management.
- Understand the Shopper's behavior
- Understand Visual Merchandising.
- Understand E-Retailing system.
- Understand E- Payment system

UG II Year: Supply Chain and Retail Management

Course Learning Outcomes: -

- Understand the Fundamental Concept of Supply Chain Management.
- Understand the importance of Supply Chain Management
- Understand the fundamental concept of Logistics System
- Understand the Understand the fundamental concept of Warehousing
- Understand the working procedure of Warehousing & Logistics System
- Discover the aspects of Retail Market Strategy

UG I Year: Personality Development

Course Outcomes

After studying this course, the students will be able to

- To cultivate skills for successful life and learn to handle failures.
- To learn the process of goal setting and SWOT analysis.
- To understand the importance of time and stress management.
- To develop core skills for employability.
- To develop effective communication skills.
- To realize the role of technology in personality development.

UG II Year: Personality Development

Course Outcomes

After studying this course,

- Students will gain knowledge about the basics of Personality Dynamics.
- Students will learn to implement techniques of Personality Development.
- Students will develop Skills of self-resilience and assertiveness in their personality.
- Students will learn Interview skills.
- Students will be able to understand about the importance of life skills needed for personality development.

Department of Education

PROGRAMME OUTCOMES

At the end of the Programme the student-teacher will be able to:

- Empowered in content and pedagogy of teaching subjects.
- Develop teaching competency and communication skills through internship programme.
- Understand the teaching as a profession and understanding of various approaches of teaching.
- Develop an awareness in the student-teacher about population and environment.
- To develop competency to solve the educational problems through action research.
- Understand the concept of knowledge and relationship between Philosophy and Education.
- Understand the role of education in promoting national & international values.
- Understand the psychology of learners and theories' of learning & motivation.
- Understand the characteristic features, strengths and weaknesses of ancient, medieval, British and contemporary system of education in India.
- Understand the administration of education at different levels and also understand the role of Headmaster in school management.

PROGRAMME SPECIFIC OUTCOMES OF B.Ed.

After successful completion of the two-year B.Ed. programme, student-teachers will be able to develop-

- ❖ Pedagogical skills
- ❖ Teaching competency
- ❖ Effective communication
- ❖ Professional ethics
- ❖ Scientific temperament
- ❖ Psychological attitude towards students
- ❖ Management & Team work abilities
- ❖ Ability of problem solving
- ❖ Critical thinking
- Action research
- ❖ Positive approach

COURSE OUTCOMES

Class : B.Ed. SEM-1

Paper -1 Child hood and Growing up

- Understand the conceptions about child and childhood (specifically with reference to the Indian Social context).
- Develop a critical understanding of the different Social, Education and Cultural Contexts at the core of the exploration of childhood.
- Develop an understanding of the different aspects of a child with diverse abilities in the Social, Cultural and Political context of India.
- Acquaint with respect to the role of different agencies in the healthy development of children.

Paper-2 Education in India – Status, Problems and Issues

- Develop understanding of the concepts, meaning and aims of education.
- Understand inter-relation of education and philosophy.
- Compare and contrast the thoughts of Indian and Western thinkers of education.
- Explore the implications of the concepts involved in educational practices.
- Develop reflective thinking among students.

Paper-3 Language Across the Curriculum

- Understand the nature and structure of language.
- Appreciate the relationship between language, mind and society.
- Explore the process of language acquisition and learning.
- Develop understanding of different language skills and development of the same.
- Generate sensitivity and competency towards catering to a multilingual audience in Schools.

Paper -4 Curriculum Development and School

- Understand the meaning of the term Knowledge and Curriculum.
- Sensitize towards the conceptual linkages and distinctions between Educational aims, Curriculum framework, Curriculum development, curriculum transaction, curriculum evaluation and Pedagogy.

Paper -5 Reading and Reflecting on Texts

- Read and respond to a variety of texts in different ways.
- Learn to think critically together and appreciate that depending on the text and the purpose of reading.
- Develop meta-cognitive awareness to become conscious of their own thinking processes as they engage with diverse texts.

Class : B.Ed. SEM-2

Paper-1 Learning and Teaching

- Examine range of cognitive capacities and erective processes in human learners.
- Acquaint with the different contexts of learning and situate schools as a special environment for learning.
- Reflect on their own implicit understanding of the nature and kinds of learning,
- Develop an understanding of different theoretical perspectives of learning with a focus on cognitive views of learning.

Paper -2 Pedagogy of a School Subject –Part -1

Teaching of Mathematics

- Understand the nature of Mathematics.
- Critically explore the historical developments leading to concepts in modern Mathematics.
- Analyze learning theories and their application in Mathematics Educations.
- Improve the competencies in secondary level Mathematics.

Teaching of Biology

- Acquire a conceptual understanding of the Pedagogy of Biology.
- Acquire and learn specific laboratory skills to conduct practical work in Biology.
- Develop and use the techniques of CCE for assessment of students performance.
- Evolve as a reflective practitioner through use of innovative practices in the teaching of Biology.

Teaching of Hindi

- Understand the importance of language in education.
- Explore different methodology of teaching Hindi.
- Develop proper skills of language learning.
- Attain efficiency and effectiveness in teaching and learning Hindi Language.

Teaching of Sanskrit

- Understand the role of Sanskrit in India and its place in the school curriculum.
- Become committed, inspired and interested in teaching Sanskrit.
- Facilitate the effective use of learning resources.
- Develop strategies in order to meet the learning difficulties in teaching Sanskrit.

Teaching of English

- Understand the need and importance of English Language.
- Develop proficiency in the language.
- Familiar with the psycholinguistics and sociolinguistics aspects of language.
- Able to use technology to enrich language teaching.
- Aware of the pedagogical practices required for teaching English on second language.

Teaching of Urdu

- Understand the need and importance of Urdu Language.
- Develop proficiency in the language.
- Familiar with the psycholinguistics and sociolinguistics aspects of language.
- Able to use technology to enrich language teaching.
- Aware of the pedagogical practices required for teaching Urdu on Third language.

Paper -3 Pedagogy of School Subject (Part –II)

Teaching of Physical Science

- Understand the nature, scope and importance of Physical science with special reference to secondary school content.
- Understand the aims and objectives of teaching Physical Science.
- Understand and make use of different approaches & methods of teaching science.
- Understand and employ several teaching techniques helpful to develop attitude and scientific method.
- Understand the importance of principles of curriculum construction organization of Physical science contact.

Teaching of Social Science

- Develop understanding about the basic differences between Social Studies and Social Sciences.
- Explore the need for teaching Social Sciences as an integrated discipline
- Develop critical understanding to justify the relevance of social Sciences in terms of Contemporary events.
- Gain knowledge about the different approaches associated with the discipline.

Teaching of Commerce

- Introduce student teachers with the methodology of teaching used in teaching of Commerce in schools.
- Make students teachers aware of the values of Commerce and the relationship of Commerce with other subjects.

- Encourage student teachers to use a wider range of teaching techniques in order to enable them to plan their lessons in teaching of commerce.
- Acquaint student teachers with the role of teaching aids, textbook, homework, libraries in commerce.
- Equip student teachers with the curriculum.

Paper -4 Language across the Curriculum

- Understand the nature and structure of language.
- Appreciate the relationship between language, mind and society.
- Explore the process of language acquisition and leaning.
- Develop understanding of different language skills and development of the same.
- Generate sensitivity and competency towards catering to a multilingual audience in Schools.

Paper -5 Drama and Art in Education

- Develop basic understanding for different Art forms- impact of Art forms on the human mind.
- Enhance artistic and aesthetic sensibility.
- Enable to respond to the beauty in different Art forms, through genuine exploration, experience and free expression.
- Develop skills for integrating different Art forms across school curriculum at secondary level.

Class : B.Ed. SEM-3

Paper -1 Pedagogy of a School Subject

- Enable connect theory of practice.
- Acquire a perspective regarding the aims of education within which their previously acquired knowledge and practice can practices can be systematized and structured
- Explore meaningful experience as a practitioner.

Paper -2 School Internship

- Understand children and the teaching learning process in a systematic manner.
- Learn to relate to and communicate with children.
- Learn the nuances of the practice of teaching in a school using appropriate methods materials and skills.
- Evaluate school textbooks and other resource material critically in the context of Children's development and pedagogic approach used.

Paper-3 Educational Psychology Practical

- Psychology Tests are standard measures for assessing behavior objectively.
- Understanding more about themselves.
- Helping people for making decision about their lives.
- Assessing severity of disorder in Human being.
- Helpful in diagnosis of Student's problems
- In assessing level of functioning or disability.
- Helps in treatment outcome.

Class : B.Ed. SEM-4

Paper -1 Gender, School and Society

- Develop understanding of some key concepts and terms and relate them with their context in understanding the power relations with respect of Educating and Education.
- Develop an understanding of the paradigm shift from Women studies to Gender studies based on the historical backdrop.
- Reflect on different theories of Gender and Education and relate it to power relations.
- Analyze the institutions involved in Socialization processes and see how socialization practices impact power relations and identity formation.

Paper -2 Educational Technology and ICT

- Understand the computer peripherals and its Organization in computer system.
- Develop skills in handling computer and using word documents.
- Develop skill in computation, analysis and interpretation of data by using Excel spread sheets.
- Understand the Educational implications of Power Point Presentation and its use in classroom context
- Understand the applications of Information Technology in the fields of teacher education programme and training.

Paper -3 Creating an Inclusive School

- Identify and address the diverse needs of all learners.
- Acquaint with the trends and issues in Inclusive Education.
- Develop capacity of student- teachers for creating an inclusive School.
- Appreciate various inclusive practices to promote Inclusion in the classroom.

Paper -4 Optional Course (Any one of the subject mentioned below)

a) Value Education

- Understand the concept and types of values.
- Understand the meaning and basic-theories of axiology.
- Get an insight into the strategies of inculcation of values among children.
- Develop awareness about the different agencies working in the sphere of value education.
- Develop skills and techniques needed to teach value education.
- Understand the role of the teacher in value-education.

b) Futurology in Education

- To acquaint students with the significance of the study of Futures in general and Futurology in particular.
- To develop the knowledge and skills of students for Forecasting Futures of Education through methods and techniques.
- To develop critical thinking of students about the problem and prospects of school education in future.

c) Health and Physical Education

- Understand the significance of Health Education for the all-round development.
- Maintain and promote good health.
- Develop the understanding of physical education and its related fields.
- Acquire the knowledge about the teaching methods of physical education and its activities.
- Know about the effective organization of physical education activities.

d) Guidance and Counseling in School

- Understand the principles, scope and need of guidance and counseling in schools.
- Acquaint himself with nature of different problems faced by children in context of learning and development.
- Understand the acquisition and process of learning in children with special needs.
- Acquaint himself with learning disabilities of children and its remedies.
- Take up minimum guidance programme at school level.

e) Environmental Education

- Understand the concept, significance, scope and terminologies, objectives and programme of environmental education.
- Develop awareness about the various types of pollution, ecological imbalances and life and contributions of environmental activities.
- Interpret the environmental legislations in conservation and protection of the environment.
- Understand the role of governmental and non-governmental agencies in environmental education.
- Apply the methods of teaching and evaluation in environmental education.

f) Action Research

- Acquires the knowledge of concept of research and educational research.
- Understand the concept of basic, applied and action research and their differences.
- Understand the meaning, significance and scope of action research.
- Become aware of action research problems in different areas in schools.
- Acquire the knowledge of steps involved and tools used in action research.
- Acquires the skills of conducting action research and to develop the skills of interpreting and reporting the finding of action research.

Paper -5 Understanding the self

- Develop life skills to understand self.
- Enhance capacity for sensitivity, sound communication and ways to establish peace and harmony.
- Develop ability for personal growth and social skills in their own students
- Recall and reflect on their own educational journey.
- Conscious of factors that have shaped their aspiration and expectations.

Paper -6 Understanding of ICT

- Apply effectively different ICT tools, software applications and digital resources.
- Develop understanding and skills of integration of ICT in teaching learning. Evaluation and management of an institution.
- Acquire the skill of organizing and creating her/his own digital resources.
- Sensitise toward practice safe, ethical and legal ways of using ICT.

Program- Postgraduate Courses

Program Outcomes:

- Provide students with the critical faculties necessary in an academic environment and on the job in an increasingly complex interdependent world.
- Students will be able to apply critical and theoretical approaches to the reading and analysis of particular subjects.
- Students will also develop insight for research and also study research methodology which will help them to present their ideas in a structured manner.
- Students will develop a thorough knowledge of theories, concepts and research methods in the field and apply them in research design and data analysis.
- Students will gain confidence to become entrepreneur as well in the areas of their interest.

Program Specific Outcomes:

(A) Faculty of Arts

(I) MA(Master of Arts)

The Faculty of Arts in the college offers **PG in Political Science, English and Hindi.**

- ❖ Students will develop critical faculties necessary in an academic environment and on the job in an increasingly complex interdependent world.
- ❖ Students will be familiar with representative literary and cultural texts within a significant number of historical, geographical, and cultural contexts.
- ❖ Students will be able to apply critical and theoretical approaches to the reading and analysis of literary and cultural texts in multiple genres.
- ❖ Students will also develop insight for research and study of research methodology will help them to present their ideas in a structured manner.
- ❖ Students will develop a thorough knowledge of theories, concepts and research methods in the field and apply them in research design and data analysis.

(i) Department of English

Program Specific Outcomes

The programme aims to develop the ability of students to critically examine and restate their understanding of literary texts employing individual linguistic skills, engendering application of literary concepts and critical approaches to arrive at the core and essence of narratives. The learning process would also lead to a larger comprehension of global and national social issues thereby facilitating the students to address them proactively. - Students also obtain a value orientation by means of poetic justice in tragedy or comedy and comprehend human actions and their consequences in life.

Paper III Fiction

- The student will develop the ability and interest to read literary prose and fiction on their own.
- The student will be able to understand how society and culture played a significant role in the lives and career of the writers of the age.
- The students will analyze and appreciate the narrative styles of the writers and the innovative novelistic techniques employed by them.
- They will be exposed to different cultures, myths, and histories of various nations through fiction.
- The student will receive creative acumen and will be nourished by the scintillating stories and a sense of inclination towards literary sensibility.

Paper IV Prose

- The students will be able to write analytically in a variety of formats, including essays, research papers, reflective writings, and critical reviews of secondary sources.
- Students would also be able to ethically gather, understand, evaluate and synthesize information from a variety of written and electronic resources.

- The students will be trained to write well-constructed essays and also enhance their vocabulary.
- The students will be able to demonstrate through discussion, writing tasks and end exams the ability to interpret and appreciate the literary nuances of prose writings.
- The students will take cognizance of the historical, social and cultural contexts of each work and thereby make connections between literature and society.
- The students will be able to understand the nuances of language, structure and composition of ideas in English Prose.
- Understand the values of life through various styles of reflection on life.
- Get acquainted with the habit of reasoning and analysis through prose reading pros.

Class – M.A. (English Literature) III Sem

Paper I Critical Theory

- The course gives an introduction to various forms of literary theory and criticism, which is the most essential aspect of literary appreciation.
- The students will be able to Understand the seminal theories of modern literary criticism and develop a critical outlook towards literature.
- Apply critical theories for literary interpretation and analyse and interpret literary texts from critical point of view.
- Evaluate literary texts based on critical concepts.

Paper II English Language

- This paper will enable the students to understand the origin, the growth and development of English language, its structural, grammatical and functional aspects.
- To trace out the history of English Language and varied components of linguistic structures of the language and understand the regional and social variations of English.
- It also gives an overview of phonetics and helps the students to appreciate the relationship of language, society, culture and literature.
- The students will be able to understand the nuances of English language and to apply and analyse the theories and the concepts in speech sounds .
- The students will grasp the complexity of language as a communication system shaped by cognitive, cultural and social factors Comprehend the features of speech sounds in English and their respective RP phonetic symbols.
- The learners will know the working of the speech organs and attain a practical knowledge of the articulation of the English speech sounds, acquiring, especially, the following skills.

Paper III Indian Writings in English

- This paper introduces students to Indian Writing in English, through the study of various literary genres such as Poetry, Prose, Drama, Fiction and Critical Theories.
- It will help the students to appreciate the literature written in English by Indians. This paper is designed to equip students with the knowledge and skills to read and understand texts in Indian Writing in English.
- The students will be able to understand the nuances of Indian Writing in English.
- Interpret and demonstrate their understanding of various facets of Literature and analyse literary

forms of the text and to appreciate Literature.

- Effectively understand and communicate ideas related to the Indian Writing in English with its background and settings.
- To critically appreciate and analyze the works of Indian writers writing in English.

Paper IV American Literature

- The course will a glimpse of American history and enable the students to review and analyse literary texts from America in their socio-political context..
- The student will be able to understand the American spirit and analyse various literary innovations and their culture by studying the works of writers from America.
- Analyse and infer the philosophic principles from the works, assess the speech, life and dreams of America as reflected in the literary works .
- Identify the varied responses that are earned through reading the creative works Analyse the wide variety of experiences and attitudes in contemporary American society through the works and will be able to convincingly write supportive arguments.

Class – M.A. (English Literature) IV Sem

Paper I Critical Theory

- The course will enable the students to review and recognize basic elements of literary works for better interpretation and analysis. The student will be able to formulate and integrate various aspects of principles of criticism in literary works that will lead to literary appreciation and understanding.
- To make the students understand the basic theoretical concepts underlying contemporary approaches to literature and the major difference between various schools of criticism.
- The students will be able to practically analyse any literary work by identifying different aspects of literature and interpret the text intensively distinguishing its salient features and appreciate the literary works at varied levels of comprehension.
- Demonstrate the ability to use the critical theories in the practice of literary evaluation and acquire a holistic view of criticism and new trends in criticism
- Sensitize students towards recent critical theories and co-relate literary theory with literary texts.
- Develop personal responses to literary texts and ability to conduct literary research.

Paper II English Language

- The students will be able to gain knowledge of fundamental principles of English grammar including parts of speech, sentence types, sentence analysis, simple/compound/complex sentences, subject-verb agreement, punctuation etc.
- The students will understand and integrate the acquired knowledge of the lexical, grammatical structure and the theories involved.
- The students will be able to have a thorough command of English and its linguistic structures and can apply critical frameworks to analyze the linguistic, cultural and historical background of texts written in English.
- The students will comprehend basic grammatical and semantic categories of English.
- The students will also be given an overview of stress, syllable and intonation through the scientific /phonetic study of the sentence structures.
- The students will be able to distinguish and properly enunciate voiced and voiceless sounds and

produce native-like intonation, rhythm and stress in sentences and also utilize phonetic dictionary symbols to continue to improve pronunciation.

Paper III Indian Writings in English

- The students will learn the literary, societal, cultural, biographical and historical background of the greatest English writings penned by Indian Authors.
- The students will also have an overview of Indian Literature in English Translation through the study of the eminent works of Girish Karnad, R.N Tagore etc.
- It helps the students to appreciate the literature written in English by Indians. This paper is designed to equip students with the knowledge and skills to read and understand texts in Indian Writing in English.
- It will help the students to develop personal responses to literary texts and ability to conduct literary research in Indian Writings in English.

Paper IV American Literature

- It will help the students to obtain adequate information on colonization and post-war consequences through the literary, societal, cultural, biographical and historical background of American Literature.
- The students will be familiar with the conventions of diverse textual genres including fiction, non-fiction, poetry, autobiography, plays, editorials etc. related to American literature.
- The student will be able to comprehend literary, societal, cultural, biographical and historical background of the greatest writings that constitute the literature of America.

(ii) Department of Hindi

Program specific outcomes

After completion of the course, the student will develop ability.

- ❖ To prepare for the examinations like NET/ SLET/ Ph.D
- ❖ To make use of Hindi language for getting employment.
- ❖ To prepare for competitive examinations.
- ❖ To appreciate Hindi literature.
- ❖ To inculcate moral values in order to strengthen the society.
- ❖ To prepare for journalism.
- ❖ To prepare for work on computer in Hindi.
- ❖ To prepare for post of Hindi Adhikari in Government and banks.

Course Outcomes

M.A. (Hindi) I Sem

Paper I Prachin evam Madhyakaleen Kavya tatha Uska Itihas

- Describing the progressive nature of Sant Kabir and his writings.
- Describing the content and the skill of writing Jayasi, Vidhyapati in context of the socio cultural condition of his period.
- Understanding the vision of Raidas, Dadu Dayal, Ameer Khusro

Paper II Adhunik Hindi Gadhya Aur Uska Itihas

- Develop interest in Novel.

- Understand Novel forms and their types.
- Get information about the modern Hindi literature.
- Know the concept of Drama.
- Know the concept and process of dramatics.
- Increase vision regarding literary value.
- Learn the origin of drama as dramatic art.

Paper III Bhartiya avam Paschatya Kavya Shastra

- Know Indian poetry structure in Ancient and modern era.
- Know the importance of criticism.
- Increase vision regarding literary value.
- Get information about Alankar in Hindi literature.

Paper IV Prayojanmulak Hindi.

- Understanding the official language act of 1963 1968 and 1976.
- Understanding the concept of proof reading.
- To prepare for journalism.
- How to prepare for work on computer in Hindi.

Class - M.A. (Hindi) II Sem

Paper I Pracheen evam Madhyakaleen Kavya tatha Uska Itihas

- Understanding the vision of Mira in context of her Krishna bhakti poetry.
- Describing the Krishna Leela poetry of Soordas by relating it with his philosophy of his life.
- Describing the Rama Bhakti poetry of Tulsidas along with a philosophy of Bhakti cult.

Paper II Adhunik Hindi Gadhya Aur Uska Itihas

- Develop the story reading skills.
- Develop knowledge of literary forms in Hindi story.
- Obtained information about the history of modern Hindi literature.
- Obtained information about literary theory.
- Develop relations between stories and society.
- Understanding the social consciousness of Premchand, Nirmal Verma, Amritlal Nagar, Manuu Bhandari through their short stories.
- Understanding the change in content and style of expression in short stories in different periods through the stories Jai Shankar Prasad, Premchand.
- Develop the essay writing and auto Biography.

Paper-III Bhartiya evam Pashchatya Kavya Shastra

- Know the concept types of literature.
- Get information about Siddhant and Vad.
- Get detail information about criticism in Hindi literature.
- Know the concept and process of literature.
- Know Western poetry structure in Ancient and Modern era.

Paper IV Prayojanmulak Hindi.

- Understanding the meaning concept and importance of functional Hindi.
- Understanding various forms and functional Hindi according to its area of applications.
- Understanding the importance of translation junior and senior in government and private.
- Understanding various forms of writing in media.
- To prepare for Hindi officer in different books.
- PRO in public sectors.

Class - M.A (Hindi) III Sem**Paper I Adhunik Hindi Kavya Aur Uska Itihas**

- Developed Creativity.
- Love for poetry.
- Familiarizing the literary Contribution of as well as work of famous poet like Maithlisharan Gupta and Jaishankar Prasad.
- To introduce in the poets of modern Hindi poetry and its function.
- Development of poetic tendency, moral values sensation and thinking tendency.

Paper II Bhasha Vigyan Evam Hindi Bhasha

- To develop love towards mother language.
- To understand the importance of language.
- Knowledge of language behaviour and its proper use.
- Knowledge of grammar rules.
- Development of sentence structure and accuracy of writing.

Paper III Hindi Sahitya Ka Itihas

- Understanding the concept of history of literature.
- Understanding the basis of classification of Hindi literature.
- Understanding the features of Aadikal, Bhaktikal, Ritikal in the context of socio cultural and political condition of that period.
- Understanding the importance and basis of the names given to each period of Hindi literature.
- Describing the Ram and Krishna Kavya Kavi and his poetry.

Paper IV Optional (Surdas)**We will get information about Surdas the leading poet of Bhakti period.**

- Will be familiar with the importance of Surdas famous book.
- Will get information from old age period.
- Will understand the importance of golden age.
- Will gain knowledge of literary role of prominent poets, kumbhan Das, Krishna Das, Parmanand Das.
- Will be familiar with the Vatsalya Ras.

Class - M.A.(Hindi) IV Sem

Paper I Adhunik Hindi Kavya Aur Uske Itihas

- The significance of poetry and tendency to write poetry will develop.
- There will be knowledge of prominent poet like Sumitranandan Pant, Suryakant Tripathi Nirala poets of modern poetry.
- Will have sense of all characteristics of modern Hindi poetry and it's major poet.
- Intellectual ability will develop.
- Interest in creation will arise.
- Students will understand the importance of poetry.

Paper II Bhasha Vigyan Evam Hindi Bhasha

- There will be knowledge of historical background of Hindi and students will get proper knowledge of their language.
- Will understand the nature of Hindi like noun pronoun verb etc.
- Milan the language and the use of prefix suffix.
- Vocabulary will develop.
- Developing the translation process.

Paper III Hindi Sahitya Ka Itihas

- Understanding the reason of emergency of Aadhunik Kal in Hindi literature.
- Understanding the features of Aadhunik Kal in the context of social cultural and political condition of that period.
- Understanding the literary trends of Adhunik Kal.
- Understanding the history of development of Hindi drama, short stories and novels.

Paper-IV Optional (Surdas)

- Will understand the history of Bhakti and will get information about many poetic stream.
- Emotions will develop.
- Will gain detailed knowledge of personality as well as work of devotional poet such as Raskhan, Meera, Nandas etc.
- Will understand the characteristics of important epics like Sursagar.
- Learning and writing skills will develop.

(iii) Department Of Political Science

Program Specific Outcomes

- ❖ Develop the ability to use critical, analytical, and reflective thinking and reasoning
- ❖ Reflect on social and ethical responsibilities in his/her professional life.
- ❖ Gain experience and confidence in the dissemination of project/research outputs
- ❖ Work responsibly and creatively as an individual or as a member or leader of a team in multidisciplinary environments.
- ❖ Develop the ability to use critical, analytical, and reflective thinking and reasoning
- ❖ reflect on social and ethical responsibilities in his/her professional life.
- ❖ Gain experience and confidence in the dissemination of project/research outputs

- ❖ Work responsibly and creatively as an individual or as a member or leader of a team and in multidisciplinary environments.
- ❖ Communicate effectively by oral, written, graphical and technological means and have competency in English.
- ❖ Independently reach and acquire information, and develop appreciation of the need for continuously learning and updating.
- ❖ Common Outcomes of Master of Arts Programs in Social Sciences:
- ❖ Develop a thorough knowledge of theories, concepts, and research methods in the field and apply them in research design and data analysis.
- ❖ Assess the impact of the economic, social, and political environment from a global, national and regional level.
- ❖ Know how to access written and visual, primary and secondary sources of information, interpret concepts and data from a variety of sources in developing disciplinary and interdisciplinary analyses.

Course Outcomes

Class – M.A. I Sem

Paper I - Modern Indian Political Thought

- Tracing the evolution of Indian political thought from ancient India to modern India
- To demonstrate knowledge of key thinkers and concepts
- To understand the nature, methods and significance of political Thought.

Paper II - Comparative Politics

- Tracing the evolution of Comparative Politics as a discipline.
- To understand the forms of government in various countries and their working pattern.
- To compare with procedure of various social institutions and government institutions.
- To analyze the meaning of organs of government and theory of separation of power.

Paper III - International Politics & Contemporary Political Issues

- To analyze the history of international relational through the causes and phases of Colonialism.
- To know the impact of first world war and second world war and its causes and consequences.
- To criticize the various ideologies which lead to the destruction of world.

Paper IV – Major ideas and issues in Public Administration

- Students will be able to lead and manage in public governance.
- Students will participate in and contribute to the policy process.
- Students will be able to analyze, synthesize, think critically, solve problems, and make decisions.

Class – M.A. II Sem

Paper I – Western Political Thought

- The course is rich in so far as understanding such crucial issues and concepts as rights, equality, liberty, freedom, constitutionalism, community rights, multiculturalism, democracy, social justice, identities, hegemony and dominance, importance of civil society etc.
- The course equips the students with the most current understanding of thought processes.

Paper II – Politics of South Asian Countries “Pakistan, Bangladesh, Sri Lanka and Nepal”

- The course is designed to make students to know the South Asian region in a greater detail.
- The future of one's own destiny is intertwined with the future of others in the region. Scope for research in the area is bright as a number of foundations are coming forward to finance the students in the region.

Paper III – International Organization

- Its aim is to enable the students gain their own theoretical perspectives in approaching world politics.
- The course helps Indian as well as foreign students in understanding International Relations as part of Political Science from a global.

Paper IV — Research Methodology

- The theoretical aspects of the course will comprise an exploration of various theories, concepts and terms that are part of the Research Methodology.
- The empirical aspects will provide a broad understanding of various research methods and techniques, besides dealing with the practical realm of research.

Class – M.A. III Semester

Paper I – Indian Government and Politics

- To know the salient features in making of Indian constitution.
- To appreciate the socio-economic political factors which lead to the freedom struggle.
- To understand the constitutional orderings and institutional arrangement.

Paper II – State Politics in India

- To understand the forms of government in various countries and their working pattern.
- To compare with procedure of various social institutions and government institutions.

Paper III – International Law

- Understand the basic doctrines and concepts of international Law.
- Critically discuss the limitations and potentials of International Law.

Paper IV – Indian Foreign Policy

- To appreciate the post war developments through the emergence of third world.
- To understand the concept of power, national, regional, global and peace security.

Class – M.A. IV Sem

Paper I – Federalism in India and Local Self Government

- It provides to the students rich understanding on the different dynamics of the local self-government formations and shaping of governance in the state currently.
- The major problem that challenges Panchayati Raj System in India is substantive devolution of powers in the country.

Paper II – Government and Politics of Madhya Pradesh

- It provides to the students rich understanding on the different dynamics of the state formations and shaping of governance in the state currently.
- To under the concept of local self government.
- To understand the emerging trends in politics of Madhya Pradesh.

Paper III – Advance Political Theory

- This is reflected in a framework generally known as Modern Political Analysis.

- Students of politics are concerned about and interested in the various principles of that intellectual discipline.

Paper IV – Diplomacy and Human Rights

- This course is designed to develop conceptual, theoretical and analytical skills of students regarding Peace and Conflict.
- The course may provide an opportunity to join with NGOs working on conflict resolution.

(B) Faculty of Commerce

(II) M.Com (Master of Commerce)

Program Specific Outcomes:

- ❖ Students will gain knowledge of business and will learn the techniques of managing the business with special focus on marketing, taxation and banking theory and day to day practices.
- ❖ To impart the knowledge of basic accounting principles and the latest application oriented corporate accounting method.
- ❖ To develop the decision-making skills through costing method and practical application of management accounting principles.
- ❖ To enhance the horizon of knowledge in various field of commerce through advertising and sales promotion, auditing and entrepreneurial development.

M.Com I Sem.

Paper-I Management Concept

- Students are able to know the leadership styles.
- Students are able to know to evaluate social responsibility and ethical issues of management.
- They can practice the process of managements for functions like planning, organization, staffing etc.

Paper-II Business Environment

- The students acquire the knowledge of environment of business, social and political environment and technological environment.
- After conclusion of study the students will be able to explain the economic trends and effect of government policies.

Paper-III Advanced Accounting

- The outcomes of this paper are to provide understanding for the post graduate students on voyage accounts, insurance claim, Insolvency account of individual and partners, investment account dissolution amalgamation and sale of firm.

Paper-IV Cost Analysis and Control

- To enable the students to understand the cost accounting, budgeting, standard costing etc.
- Making students aware about importance of cost variance etc.

M.Com II Sem

Paper-I Corporate Legal Framework

- Students become aware about the company act, consumer protection act.
- To provide adequate knowledge of FEMA Act, MRTP Act.

Paper-II Organizational Behavior

- The outcomes of this paper are to make the post graduate students aware on the organizational and group behavior leadership, personality and attitude of the employees.

Paper-III Advanced Statistical Analysis

- The outcomes of this paper are to provide an understanding for the post graduate business students on statistical concepts including probability distribution, forecasting, hypothesis testing, regression, interpolation and extrapolation.

Paper-IV Functional Management

- To help in knowing the functional areas of management.
- Learners will be able to select the specialized field as professional.

M.Com III Sem

Paper-I Managerial Economic

- The students will be in a position to integrate economic policies with management decision making.
- To understand and develop management skill in students which will increase their employability chances in various organizations.

Paper-II Tax Planning and Management

- After successful completion of the course students will be able to deal with the provisions of tax planning.
- Students will learn to manage their saving in such a way so that tax liability is reduced.

Paper-III Entrepreneurship Skill Development

- The outcomes of this paper are providing an understanding to students on contemporary issues of entrepreneurship development in India.
- Knowledge of the financial institutions, project reports incentives, subsidies and managerial qualities imparted to students.

Paper-IV Accounting for Managerial Decisions

- It helps to give proper idea on financial statement analysis from the practical point of view.
- It helps in building the concept of fund flow and cash flow statement and capital budgeting.
- It helps the students how to write the managerial report.

M.Com IV Sem

Taxation Group

Paper-I Direct Taxes in India

- By the end of the course students will be able to describe how the provisions of tax laws can be used for tax planning.
- Students will be able to explain different types of incomes and their tax liability.
- Students will be able to state the use of various deductions to reduce the taxable income.
- Students will be able to know how to file the return and the procedure of assessment, appeals and revisions.

Paper-II Business Taxation

- It helps the students to calculate various types of tax liability of various persons or assesses.
- It helps to know the tax laws for various types of persons.
- It helps to know how to calculate the taxable income of Non Resident of India, Trust and the procedure of Double Taxation System.

Paper-III Custom Duty and Practice

- Students will become aware of rules of valuation of custom goods, custom duty etc.
- Students will learn to calculate the custom duty liability of the goods import and export of goods.

Paper-IV Goods and Service Tax-law and Practice

- Students will become aware of goods and service law and practice.
- After successful completion of the course students will learn about basic concept of GST.

Marketing Management Group**Paper-I Advertisement and Sales Management**

- To inculcate knowledge of advertising, effective types of advertising.
- Students become aware of the traditional and modern concept of advertising.

Paper-II Consumer Behavior

- The students will be able to understand the various factors which affect the behaviour of individuals as consumers.
- They will be in a position to design effective marketing strategies and policies.

Paper-III Rural and Agricultural Marketing

- After completion of the course students will learn about rural environment.
- Students will learn to deal with rural population during marketing of urban and agriculture produce.

Paper-IV International Marketing

- It gives the fundamental understanding of marketing concepts and marketing policies across the world.
- It helps in acquiring comprehensive theoretical practical competencies in international marketing.
- It develops the understanding of the challenges of business environment.
- Students will be able to know the requirement of documents of International Marketing.
- Students will get the exposure of International Banking also.

(C) Faculty of Science**(III) M.Sc. (Master of Science)****Program Specific Outcomes:**

- ❖ The Faculty of Science (Bio/Mathematical Science) offers the following subjects- Zoology, chemistry, Biotechnology, Computer Science and Mathematics.
- ❖ The students can become competent biotechnologists, chemists, mathematician and programmer employ, implement and utilize their knowledge for the existing paradigm of agriculture, industry, healthcare, IT and restoration of degraded environment to provide sustainable environment to present society.
- ❖ The students can identify and can formulate, research literature, research proposals and analyze complex problems, reaching substantiated conclusions using the principles of biological, physical, chemical and mathematical sciences.
- ❖ The students with extraordinary scientific potentials can pursue their career as scientist.
- ❖ Awareness of ethical issues and regulatory considerations while addressing societal needs for sustainability.
- ❖ Higher studies (M.Phil, Ph.D) can be pursued in order to attain research positions. Various examinations such as CSIR-NET, UGC-NET, SET, GATE, ICMR, DBT and many other

opens channels for promising careers in different fields.

- ❖ Apply the knowledge of Technology, Mathematics, Networks and computing in the core information technologies.
- ❖ Ability to interpret and apply research literature to investigate complex problems using research methodologies, techniques and tools.

(i) Department of Biotechnology

Program Specific Outcomes

- ❖ Students will be able to conduct experiments, analyze and interpret data for investigating problems in Biotechnology fields.
- ❖ Higher studies (M. Phil, Ph. D) can be pursued in order to attain research positions. Various examinations such as CSIR-NET, ARS-NET GATE, ICMR, DBT and many other opens channels for promising career in research.
- ❖ Students can get job in biotechnology in different fields like Pharmaceutical Companies, Bio fertilizer industry, Aquaculture industries, Environmental units, Crop production units, Food processing industries, National Bio-resource development firms and Banking.
- ❖ Entrepreneurship ventures such as consultancy and training centers can be opened.
- ❖ Beside industrial sector there are ample opportunities in academics as well.
- ❖ Students will be able to understand the potentials, and impact of biotechnological innovations on environment and their implementation for finding sustainable solution to issues pertaining to environment, health sector, agriculture, etc.
- ❖ Career opportunities are available for students with biotechnology background in abroad especially in countries like Germany, Australia, Canada, USA and many more where Biotechnology is a rapidly developing field.

Course Outcomes

Class : M.Sc (Biotechnology) I Sem

Paper I- Cell Biology

The objective of this course is to provide exposure to the students on cells, structural and functional units of living organisms, and morphological studies. Moreover, they will learn the functions and vital processes of various cellular compartments and organelles. It also gives the structural-functional and biochemical details of all cellular activities.

- Students will be able to understand the overall structure of prokaryotic and eukaryotic cells and their internal structures including organelles.
- Students will be able to assess the importance of various stages of cell cycle, and their regulation.
- Students should be able to enumerate the differences in cellular organization of various life forms.
- They can assess and relate the information to the context of cell biology.

PAPER II - Structure, Function and Metabolism of Biomolecules

The objective of this course is to give students an idea on different biological molecules, their origin, biological role and its degradation according to the needs and demand of the system under various conditions. Also, the interrelation of each of these metabolic pathways and their contribution in various metabolic disorders are also explained in detail.

- Students will be able to understand the importance of chemical foundation in living organisms.
- Students should be able to analyze the various types of bonds and interactions between the biomolecules and water.
- The students will be able to interpret molecular structure and interactions present in proteins, nucleic acids, carbohydrates and lipids.
- The students will be able to correlate how the large biomolecules such as proteins, carbohydrates, lipids, nucleic acids are made from the simple precursors.

PAPER III - General and Applied Microbiology

The objective of this course is to give students an introduction about the microbial world- their distribution- morphology and reproduction and about the role of microorganism in various fields of science.

- Student will understand the diversified branches of microbiology.
- Student will know the theoretical and practical aspects of microbial growth and physiology
- Students will learn about the morphology and physiological characteristics of different groups of microorganisms.
- Students will be able to understand virus cultivation, phages and bacterial/yeast genetics.

PAPER IV – Bioinstrumentation

The objective of this course is to make students understand the physical principles behind the various techniques available for interrogating biological macromolecules. Also, they will be able to interpret the results obtained from such studies.

- Students will be able to understand, design, develop and analyze instrumentation of various microscopic, spectroscopic, electrophoresis and chromatographic techniques.
- Students will be able to describe the basis of biological signal generation and measurements.
- Students will be able to apply and evaluate safety concepts for bioinstrumentation and laboratory implementation.

- Students will be able to analyze and interpret data from bio instruments.

Class : M.Sc. (Biotechnology) II Sem

Paper I- Molecular genetics

Students will learn the basic principles of inheritance at the molecular Organismal levels. They will understand causal relationships between molecule / cell level phenomenon (modern genetics) and organism level patterns of heredity (classical genetics).

- The students will be able to describe the fundamental molecular principles of genetics.
- The students will be able to understand the genetic basis of cancer – Module coordinator.
- The students will be able to describes the basic of genetic Mapping.
- The students will be able to understand the relationship between genotype in human genetic traits.

Paper II- Basic Enzymology and enzyme technology

The objective of the course is to provide a deeper insight into the fundamentals of enzyme structure and function and kinetics of soluble and immobilized enzymes. Also, it deals with current applications and future potential of enzymes.

- The student will be able to describe structure, functions and the mechanisms of action of enzymes.
- The student will learn kinetics of enzyme catalyzed reactions and enzyme inhibitory and regulatory process.
- The student will be able to perform immobilization of enzymes.
- The student will get exposure of wide applications of enzymes and their future potential.

PAPER III- Molecular Biology

- Students will learn DNA replication, recombination and repair, transcription and translation.
- Students will be able to describe how gene expression is regulated at the transcriptional and post-transcriptional level.
- Students will be aware of the modern tools and techniques of genomics and isolation and identification of genes.
- Students will understand the biology and application of antisense technologies and biology of cancer.

PAPER IV- Immunology and Animal Cell Culture

- Students will understand the basic concept of innate and acquired immunity.
- Students will gain knowledge about immunoglobulin structures and diversity of antibodies, morphology and functions of various immune cells such as dendritic cells, macrophages, neutrophils and their association with MHC molecules will be studied.
- This study will make the students to understand the basic mechanisms of hypersensitivity responses and their associations with different diseases.
- Students will be able to understand immunological techniques and concept of vaccine and their targets.

Class: M.Sc. (Biotechnology) III Sem

Paper I- Genetic Engineering

- Students will be able to describe the tools and techniques of genetic engineering, DNA manipulation enzymes, genome and transcriptome analysis and manipulation tools, gene expression regulation, production and characterization of recombinant proteins.
- Students will be able to apply the knowledge of genetic engineering in biological research.
- Students will be able to perform basic genetic engineering experiments at the end of course.

- Students will acquire knowledge of advances in biotechnology healthcare, agriculture and environment cleanup via recombinant DNA technology.

PAPER II- Biostatistics and Bioinformatics

- Students will understand and apply statistical methods for the design of biomedical research and analysis of biomedical research data.
- Students will be able to utilize mathematical and statistical theory and application of biostatistical methods; use & interpret results from specialized computer software for the management and statistical analysis of research data.
- Students will be able to understand and describe and use the biological databases, perform structured query and analyze and discuss the results in biologically significant way.
- Students will be able to conduct basic bioinformatics research through bioinformatics tools and software and thus develop platform for molecular biology experiments.

PAPER III- Plant Biotechnology

- The student will be able to explain fundamental cellular events during the process of plant cell culture development.
- The student will be able to determine the factors influencing plant cell differentiation and there by execute proper techniques procedures for the maintenance of sterile condition and proper plant growth.
- The student will be able to translate the learned concepts in future studies and debate on the issue related to GMOS and evaluate its significance.
- The student will be able to differentiate various types of intellectual property rights and report measures for conservation of Biodiversity.

PAPER IV- Bioprocess and Biochemical Engineering

- Students will be able to describe relevance of microorganisms from industrial context and carry out stoichiometric calculations and specify models of their growth.
- Students will be able to give an account of design and operations of various fermenters.
- Students will be able to present unit operations together with the fundamental principles for basic methods in production technique for bio-based products.
- Students will be able to analyze any bioprocess from an economics/market point of view and give an account of important microbial/enzymatic industrial p processes in food and fuel industry.

PAPER V- Applied Biotechnology

- The student will be able to evaluate the potential of biodegradation of organic pollutants, taking microbial and physical/chemical environments, as well as the chemical structure of the compound itself, into consideration.
- Students will gain basic information of microbial cultures, sterilization methods and enzyme production

- Students will be able to explain the industrial aspects of Biotechnology for the production of various of industrial products of biological origin.
- Students will learn about the bio-safety guidelines.

CLASS : M.Sc(Biotechnology) IV Sem

Paper I - Advance in Fermentation and Food Biotechnology

- This course provides theory about micro-organisms used in fermentation processes and about application of these microbes in food fermentation processes. Theoretical background of functional micro-organisms (lactic acid bacteria, yeasts and moulds), their behavior as fermentation starters, process engineering aspects of the formation of biomass and products, and of modern biotechnology in food fermentation will be dealt with.
- Students can understand the role of fermentation microorganisms in major food fermentations.
- understand the (bio)chemical activities and conversions that take place during fermentations, and their impact on quality and safety;
- understand and carry out simple calculations on stoichiometry, microbial growth & transfer processes during food fermentations;
- carry out food fermentation processes and monitor their progress by measurements and analyses.

Paper II – Applied Immunology and Immunodiagnosics

- Be able to explain immune function and dysfunction at the cellular and molecular level.
- Be able to explain the pathology of the immune System.
- Be able to explain with examples how principles of immunology have been applied to development of new drugs , vaccines and diagnostic techniques.
- Be able to integrate information from a range of published data relating to research in immunology.
- Students can able to evaluate the relevance of currently available immunological Techniques capable of being applied in modern b w medical science.

Paper III- Principles of Drug Designing

- This course provides knowledge of the basics of microbiology, the pharmacology and principles of antimicrobial use and the use of synthetic chemistry to alter the properties of drugs.
- The course follows the evolution of drugs through time covering the principles of drug discovery in the areas of pharmacognosy and natural products; synthetic medicinal chemistry and the development of medicinal substances; the development of modern and innovative therapeutic substances including biopharmaceuticals; and future trends in drug discovery.
- The course will focus on chemistry and in particular how the chemical structure of a drug relates to its biological activity. Structure-activity relationships of drug families will include the discovery, development and design of antibiotics.
- An introduction to pharmacogenomics and bioinformatics is included in relation to the development of new drug development. Key concepts in globalisation and cultural aspects of pharmacy are integrated into this course in the areas of traditional medicine and Complementary and Alternative Medicines.
- The course builds on existing knowledge in pharmaceutics to look at chemical kinetics and the stability of pharmaceuticals.

One month training

OR

Four months Dissertation

Course Outcomes

- M. Sc. Dissertation is designed in a way to teach and train the students with practical knowledge in the different areas of Biotechnology in order to become efficient researchers to start their carrier in research through Ph.D. and R & D programmes.
- Students would gain train in the research areas selected from different fields of biotechnology like animal biotechnology, microbiology, environmental biotechnology, genetic engineering, plant biotechnology, parasitology, virology, nanotechnology and identification and validation of novel proteins.
- Students can develop understanding about the literature and dissertation writing required to carry out a good research during their Ph.D. Find the different resources needed to perform the research. Statistical analysis, presentation and documentation of research findings.
- Theoretical and practical knowledge in the different area of biotechnology to start their carrier in research through Ph.D. and other R & D programmes.

PRACTICAL OUTCOMES

- Conduct independent work in laboratory.
- Read Scientific articles and gain a critical understanding of their contents.
- Give a spoken and written presentation of scientific Topics and Research results.
- Present hypothesis is and select, adapt and conduct molecular and cell based experiments to either confirm or reject hypothesis.
- Skill development for the observation of blood cells and blood grouping and haemoglobin.
- Students able to detect the presence of protein carbohydrate, fats and Nitrogenous products in given samples.
- Estimation the techniques based for RNA and DNA and Demonstration of chromosome polymorphism.
- Understood the enzyme reaction and influence of temperature on enzyme action.
- Analyzed water quality like dissolved oxygen, hardness, pH, turbidity etc.

(ii) Department of Chemistry

Programme Specific Outcomes:

On successful completion of this Programme, students will have the ability to:

- ❖ Think critically and analyze chemical problems.
- ❖ Present scientific and technical information resulting from laboratory experimentation in both written and oral formats.
- ❖ Work effectively and safely in a laboratory environment.
- ❖ Work in teams as well as independently.
- ❖ apply modern methods of analysis to chemical systems in a laboratory setting
- ❖ Can create an awareness of the impact of chemistry on the society and development outside the scientific community.
- ❖ Become professionally trained in the area of handling sophisticated instruments.

Course Outcomes

M.Sc (Chemistry) I Sem

Paper I Inorganic Chemistry:

Students will be able to –

- Explain stereochemistry and bonding in simple covalent compounds.
- Illustrate an understanding of the principles of theories of metal-ligand bond.
- Interpret the stability of complexes.
- Understand the substitution reactions in transition metal complexes.
- Classify acid and base as hard & soft, Pearson HSAB concept & its applications.

Paper II Organic Chemistry:

Students will be able to

- Acquire the skills for correct stereochemical assignment and explain the stereochemistry of the compounds containing N, S & P. Learn conformational analysis and linear free energy relationship.
- Understand the nature of bonding in organic molecules, concept of aromaticity & host – guest chemistry.
- Learn about isotope effects, thermodynamic and kinetic control of different types of reactions.
- Know the concept and mechanism of aliphatic nucleophilic substitution reactions.

Paper III Physical Chemistry:

Students will be able to-

- Understand postulates and various model systems based on Schrodinger equation.
- Learn quantum mechanical aspect of angular and spin momentum
- Understand chemical and statistical thermodynamics and its applications.
- Learn the thermodynamic aspects of various processes and reactions.
- Learn basics of approximate methods of quantum chemistry and its applications.

Paper IV Group Theory and Spectroscopy:

Students will be able to-

- Understand idea of space groups and to learn the theory of molecular symmetry.
- Gain skills to apply group theory to vibrational and electronic spectroscopy.
- Study the origin, instrumentation and basic concepts of microwave, IR, Raman techniques.
- Basic principle of different techniques employed in molecular spectroscopy.

Paper V [A] Biology for Chemists:

Students will be able to-

- Summarize structure, functions of different organelles of cells.
- Overview of metabolic processes..
- Explain structure and biological functions of carbohydrates and lipids.
- Acquire basic knowledge of amino acids, peptides, proteins and nucleic acids.

Paper V [B] Mathematics for Chemists

Students will be able to-

- Understand basic concepts of vectors and matrix algebra.
- Application of differential calculation including maxima and minima and examples related to chemistry.
- Applications of differential equations to chemical kinetics, quantum chemistry etc.
- Learn basic rules of Integration and its applications.
- Understand permutation and probability.

M.Sc (Chemistry) II Sem

Paper I - Inorganic Chemistry:

Students will be able to-

- Understand electronic spectral studies of transition metal complexes.
- Explain magnetic properties of transition metal complexes.
- Know the preparation and properties of transition metal carbonyls, metal nitrosyls, dinitrogen and dioxygen complexes.
- Understand the structure and bonding in higher boranes, carboranes, metallocarboranes & metallocarboranes compounds with metal-metal multiple bonding.
- Understand O.R.D. & C.D. & their applications.

Paper II Organic Chemistry:

Students will be able to-

- Learn the theoretical concept of pericyclic reaction
- Familiarize the various types of aromatic electrophilic and nucleophilic substitution reaction and their mechanism.
- Understand the mechanistic and stereochemical aspects of addition reaction in multiple bonded molecules.
- Learn about the mechanism of addition of carbon- hetero atom multiple bond.
- Learn about the concept & mechanism of free radicals reactions & elimination reactions in aliphatic & aromatic substrates.

Paper III Physical Chemistry:

Students will be able to-

- Understand chemical dynamics, different theories and factors affecting the reaction rates.
- Learn Chemistry of surfaces and different types of surface phenomenon.
- Learn about thermodynamics of non equilibrium states.
- Explain macromolecules, classification, characterization and mechanism of polymerization.
- Acquire knowledge about various electrochemical phenomenon.

Paper IV Spectroscopy II and Diffraction Methods:

Students will be able to-

- Understand the Nuclear magnetic spectroscopy, Nuclear Quadrupole Resonance, Electron Spin Resonance spectroscopies and their applications.
- Learn different techniques applied for structure determination like X-Ray Diffraction, Electron Diffraction, Neutron diffraction techniques.

Paper V Computers for Chemists:

Students will be able to-

- Understand the basics of computers and computing.
- Learn elements of computer languages and programming in Chemistry.
- Develop Computer codes involving formula in Chemistry.
- Applications of Computer and Internet in Chemistry.

M.Sc. (Chemistry) III Sem**Paper I Applications of Spectroscopy I:**

Students will be able to-

- Understand the electronic spectra of d1 to d9 systems in different complexes.
- Understand the NMR spectroscopy.
- Simplification techniques of complex NMR spectrum.
- Learn the basics of Mossbauer spectroscopy and its application.

Paper II Photochemistry:

Students will be able to-

- Explain the fate of excited molecules, quantum yield & actinometry.
- Outlines the mechanistic aspects for photochemical transformations in alkenes, carbonyl and aromatic compounds
- Familiarizes with a broad variety of photochemical systems and their applications in environment and eye-vision.

Paper III Environmental Chemistry:

Students will be able to-

- Understand atmosphere, atmospheric chemistry, tropospheric chemistry.
- Know about air pollution, acid rain, green house effect, urban air pollution and stratospheric ozone depletion.
- Know about aqueous Chemistry, water pollution, waste and sewage treatment, techniques of purification and disinfection, analysis of BOD, COD and DO.
- Understand environmental toxicology, toxic heavy metals, toxic organic compounds, polychlorinated biphenyls and polynuclear aromatic hydrocarbons.
- Know about soil pollution and environmental industrial disasters.

Paper IV Polymer:

Students will be able to-

- Understand some of the basic terminology in polymers & characterization.
- Learn about the different mechanism involved in polymerization, polymerization condition and polymer reaction.
- Learn analysis & testing of polymers.
- Know about Inorganic polymers, their structure and applications.

Paper V Heavy Chemicals and Metals:

Students will be able to-

- Learn the importance of chemical industry & their adverse effects on environment.
- Learn scientific disposal of untreated industrial effluents.
- Students will be skilled in critical training and analytical reasoning in reactions of heavy chemical and metals.

Course Outcomes

M.Sc. (Chemistry) IV Sem

Paper I Applications of Spectroscopy -II:

Students will be able to-

- Understand the 2D NMR Spectroscopy.
- Basics of Mass Spectroscopy and its applications.
- Structural elucidation of simple organic molecules using UV-Vis, IR, NMR and Mass Spectroscopy techniques.

Paper II Solid State Chemistry:

Students will be able to-

- Understand the principles of solid state reactions.
- Identify defects in crystal structure and thermodynamics behind the defects.
- Understand band theory and classification of materials on the basis of magnetic properties.
- Basics of organic solids and new superconductors.
- Learn different types of crystals and their applications.

Paper III Biochemistry:

Students will be able to-

- Learn the basic of transport properties and electrochemical phenomenon.
- Know about the various metal ions present in our body.
- Learn about the different enzymes participating in the chemical reactions inside the body
- Their functions and biotechnological applications of enzymes.
- Study about the different oxygen carriers present in the body with their structure and stereochemistry.

Paper IV Analytical Chemistry:

Students will be able to-

- Estimate kinds of errors in chemical analysis & Calibration techniques.
- Theoretical understanding of analysis of adulterants present in food.
- Learn fundamental principle of water analysis .
- Understand the basics of clinical chemistry and drug analysis.
- Learn basic techniques of chemical analysis use in soil, fuel, body fluid & drugs..

Paper V Medicinal Chemistry

Students will be able to-

- Understand the concept of structure and reactivity in drug discovery
- Gain knowledge in drug designing & drug metabolism.

- Know synthesis and efficacy of antibiotic ,antifungal & non steroidal anti- inflammatory drugs.
- Gain knowledge in the mode of action and uses of drugs.

Practical Outcomes

(i) Inorganic chemistry Practical

The students will be able to-

- Estimate quantitatively two and three metal ions by gravimetric and volumetric analysis from mixture.
- Prepare a various inorganic complexes and their spectral study.
- Qualitative analysis of inorganic mixture containing eight radicals including insoluble.
- Understand the chromatographic techniques paper, thin layer, ion exchange and column chromatography for separation of cations and anions.
- Spectrophotometric determination of some metal ions, fluoride, nitrite & phosphate.
- Flame photometric determination of Na, K.

(ii) Organic Chemistry practical:

The students will be able to-

- Separate and analyze the different component of mixtures of simple organic compounds.
- Independently perform two or more step organic synthesis.
- Separation and identification of organic compounds using chromatography.
- Extract, identify and characterize the compounds isolated from natural products
- Quantitative estimation of elements, functional groups and simple organic compound.
- Analyse the organic compounds by their spectral data.

(iii) Physical Chemistry Practical:

The students will be able to

- Learn calibration and find error in different volumetric apparatus.
- Determine the rate constant of first order reaction , energy of activation and factors- affecting rate of reaction viz concentration, catalyst, volume etc.
- Determine solubility product of sparingly soluble salts using conductometer.
- Learn acid base titrations using instruments like Conductometer, pH meter/ potentiometer.
- Determine the rate constant for inversion of sugar using polarimeter.
- Determine physical properties like pKa of an indicator, stoichiometry and stability constant using Spectroscopic techniques.
- Determine partial molar volume of different solute (NaCl, KCl, HCl) in a binary mixture.

(iii) Department of Computer Science Program Specific Outcomes

M.Sc. (Computer Science)

Program Specific Outcomes

At the end of the Program M.Sc. CS pass outs will have successful careers based on their understanding of formal and practical methods of Application Development using the concepts of computer programming, software and design principles.

- ❖ They will demonstrate analytical and design skills including the ability to generate creative solutions and exhibit team-oriented, professionalism through effective communication in their careers.
- ❖ They will be able to exhibit effective work ethics and be able to adapt to the challenges of a dynamic job environment.
- ❖ They will be able to appreciate the importance of goal setting and to recognize the need for life-long learning.
- ❖ Job roles include Web Development, Software/ Application development, Software Engineer, Software Tester, System Analyst , Mobile computing, Business Analyst, Network Manager , Database Administrator, Technical Consultant, Digital Marketing expert to name a few.
- ❖ After completion of the course candidates can even opt for M.Phil or P.hD.

Course Outcomes

Class – M.Sc. (CS) I Sem

Paper I Discrete Mathematics Structures

After studying this subject student would be able to:

- Identify and apply basic concepts of set theory, arithmetic, logic, proof techniques, binary relations, and graphs.
- Produce convincing arguments, conceive and/or analyze basic mathematical proofs and discriminate between valid and unreliable arguments.
- Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems and make effective use of appropriate technology.
-

Paper II Programming Skills with C ++

After studying this subject student would be able to:

- Develop a thorough understanding of object-oriented programming by designing programs using OOP techniques
- Develop a good documentation style in all of the programs written in this course.
- Develop a thorough understanding of stream input/output for both console and files.
- Develop the ability to analyze problems and propose algorithms to solve them.
- Develop a menu-driven solution for a real world problem, capable of taking input from user, storing them permanently and open in the format required by the user applying exception handling wherever necessary.

Paper III Computer Organization & Architecture By the end of this course, students should be able to:

- Understand the basics of computer hardware and how software interacts with computer hardware, understand how computers represent and manipulate data
- Assemble a simple computer with hardware design including data format, instruction format, instruction set, addressing modes, bus structure, input/output, memory, arithmetic/logic unit, control unit, and data, instruction and address flow
- Use boolean algebra as related to designing computer logic, through simple combinational and sequential logic circuits

- Analyze and evaluate computer performance.

Paper IV Office Tools

By the end of this course, students should be able to:

- Recognize when to use each of the Microsoft Office programs to create professional and academic documents, reports, worksheets and presentations.
- Use Microsoft Office programs to create personal, academic and business documents keeping in mind prevalent professional and/or industry standards.

Class – M.Sc. (CS) II Sem

Paper I Data Structures And Algorithms

After finishing the course ,student should be able to -

- Choose appropriate data structure as applied to specified problem definition.
- Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
- Apply the concepts learned to various domains like DBMS, compiler construction etc.

Paper II Advanced Computer Networks

After studying this subject, students should be able to:

- To apply the concepts of layered architecture in assessing the placement of network devices, protocols and services.
- To compare the services provided by the UDP/TCP transport layer protocols and explain the mechanisms used to provide a reliable data transport service on an unreliable IP network.
- Analyze the application of network technologies in designated scenarios and explore how these technologies can be deployed to support the Quality of Service requirements of current and future applications.

Paper III Advanced RDBMS

After studying this subject, students should be able to:

- Populate and query a database using SQL DML/DDI commands.
- Declare and enforce integrity constraints on database as needed.
- Design and implement a database schema for a given problem-domain
- Normalize any database as per requirement.
- Students can develop a small back-end application having complete audit-trail, so that any intrusion can be identified.

Paper IV Information Storage Management

Upon successful completion of the course, students should be able to:

- Identify the need for data centers, storage needs and categorizing as per requirement.
- Apply the techniques used for data maintenance in single or networked system storage.
- Identify information security requirements and provide solutions
- Understand and articulate business continuity solutions – backup and replications, along with archive for managing fixed content.

Class – M.Sc. (CS) III Sem

Paper I Linux & Shell Programming

After studying this subject, student will be acquainted with –

- The structure of OS and basic architectural components involved in OS design.
- The various device and resource management techniques for timesharing and distributed systems.
- Mutual exclusion, Deadlock detection of distributed operating system.
- Use of Unix/Linux utilities to create and manage simple file processing operations.
- Organizing directory structures with appropriate security.
- Developing shell scripts to perform complex tasks.

Paper II Compiler Design

After studying this subject, student will be acquainted with –

- Identifying the tokens.
- The design process of a compiler including its phases and components.
- Writing code for the lexical analysis phase .

Paper III Programming Skills With Java

After studying this subject, student will be acquainted with –

- Implementing Object Oriented programming concepts using basic syntax of control structures, strings and functions for developing skills of logic building activity.
- Identifying classes, objects, members of a class and the relationships among them needed for finding the solution to specific problems.
- Demonstrating how to achieve reusability using inheritance, interfaces and packages and achieving faster application development.
- Understanding and use of different exception handling mechanisms and concept of multithreading for robust, faster and efficient application development.
- Developing web applications with netbeans and J2EE Technologies.

Paper IV Elective – I Data Warehousing & Mining

After studying this subject, student will be acquainted with –

- Functionality of the various data mining and data warehousing components, strengths and limitations of the models..
- The techniques of various analyzing data.
- Different methodologies used in data mining and data ware housing.
- Applying warehousing and mining with various technologies to different types of data.

Paper IV Elective - II Operations Research

After studying this subject, student will be acquainted with –

- Defining and formulating linear programming problems and appreciate their limitations.
- Solving linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
- Conducting and interpreting post-optimal, sensitivity analysis and explain the primal-dual relationship.

- Developing mathematical skills to analyse and solve integer programming and network models arising from a wide range of applications.
- Effectively communicating ideas, explaining procedures and interpreting results and solutions in written and electronic forms to different audiences.

Paper IV Elective III Software Engineering

After studying this subject, student will be acquainted with –

- Various software application domains and different process models .
- Converting requirements model into the design model and using software and interface design and engineering principles.
- SCM and SQA and classifying different testing strategies and tactics.
- Principles of Software Project management. This will enable them to handle responsibilities of project manager.

Class – M.Sc. (CS) IV Sem

Paper I Big Data Analytics

After studying this subject, student will be acquainted with –

- Big data systems and the main sources of Big Data in the real world.
- Use of frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
- Implementing several Data Intensive tasks using the Map Reduce Paradigm.
- Application of several newer algorithms for clustering, classifying and finding associations in Big Data.
- Designing algorithms to analyze Big data like streams, Web Graphs and Social Media data and construct recommendation systems.
- Applying the knowledge of Big Data to fully develop a BDA.

Paper II Multimedia And Computer Graphics

After studying this subject, student will be acquainted with –

- The concepts of computer graphics, system and design of algorithms.
- Techniques of clipping, two and three dimensional transformations, windowing, and shading.
- Multimedia terms, hardware and basic tools needed.
- The compression techniques and their industry standards.
- The process of sampling, MIDI AND MIDI devices.

Paper III PHP & MySQL

After studying this subject, student will be acquainted with –

- Usage of server-side scripting
- Concept of data persistence
- Skills to program logic using PHP and handle data using MySQL
- Sound Knowledge of PHP & MySQL required to develop Dynamic Websites.

Paper IV Elective – I Enterprise Resource Planning

After studying this subject, student will be acquainted with –

- Classification of different processes of the organization and relationship among all processes.
- Examining systematically the planning mechanisms in an enterprise, and identify all components in an ERP system and the relationships among the components,
- Generic Model of ERP and General ERP Implementation Methodology.
- Applying the concepts of BPR, SCM and CRM.
- Knowledge of SAP and Oracle Apps.

Paper IV Elective – II Cloud Computing

After studying this subject, student will be acquainted with –

- Define Cloud Computing and memorize the different Cloud service and deployment models
- Describe importance of virtualization along with their technologies.
- Use and Examine different cloud computing services
- Understand Mobile Cloud Computing .
- Design & develop backup strategies for cloud data based on features.

Paper IV Elective – III Artificial Intelligence

After studying this subject, student will be acquainted with –

- Knowledge of the building blocks of AI as presented in terms of intelligent agents.
- Problems as a state space, graph, design heuristics and select amongst different search or game based techniques to solve them.
- Developing intelligent algorithms for constraint satisfaction problems and also design intelligent systems for Game Playing.
- Representing various real life problem domains using logic based techniques and use this to perform inference or planning.
- Formulating and solving problems with uncertain information using Bayesian approaches.

Practical Outcomes

- Students will be able to use each of the Microsoft Office programs to create professional and academic documents, letters, reports, worksheets, charts, graphs and presentations.
- Students will be able to develop applications through understanding of object-oriented programming by using OOP techniques
- By implementing data structure in programs, students will be able to develop applications using data structure algorithms.
- Knowledge of Oracle software helps students to design and develop fully functional database applications using SQL and PL/SQL.
- Use of Unix/Linux utilities to create and manage simple file processing operations. Organizing directory structures with appropriate security. Developing shell scripts to perform complex tasks.
- By using Java programming skills students will be able to learn reusability, interfaces, and packages for achieving faster application development. Understanding and use of different exception handling mechanisms and concept of multithreading for robust, faster and efficient application development. Developing web applications with netbeans and J2EE Technologies.

- Acquired knowledge of Bioinformatics & Artificial Intelligence.

(iv) Department of Mathematics

Program Specific Outcomes

- ❖ Understand the fundamental principles underlying the major areas of mathematics.
- ❖ Able to apply analytical and theoretical skills to find solutions to different models representing problems in various disciplines.
- ❖ Apply knowledge of mathematics, in all fields of learning including higher research and its extension.
- ❖ To develop abstract mathematical thinking.
- ❖ Adjust and grow themselves to the demands of growing field of Mathematics.

Course Outcomes

Class - M.Sc. (Mathematics) I Sem

Paper I: Advanced Abstract Algebra I

The students will be able to

- Define solvable, nilpotent groups and modules.
- Find extension fields and Roots of polynomials algebraic and transcendental functions.
- Define finite field and their properties.
- Define the concept of linear transformation.

Paper II: Real Analysis

- Define Riemann Stieltjes integrals, its existence and properties.
- Understand concept of convergence of sequence and series.

Paper III: Topology I

The students will be able to

- Understand the concept of topological space, types of topologies and basic definitions involved.
- Differentiate between hereditary and topological properties of a space.
- Discuss alternate methods of defining Topology.

Paper IV Complex Analysis I

- Solve the problems of complex integration.
- Appreciate the concepts of Residue theorem, Cauchy Goursat Theorem, Morera's theorem.

Paper V Differential and integral Equations- I

- To solve linear differential equation of second order
- To find solutions of Volterra and Fredholm integral equations.
- Understand the concept of existence and uniqueness theorem of differential equations

Class - M.Sc. (Mathematics) II Sem

Paper I: Advanced Abstract Algebra II

The students will be able to

- Define modules, Noetherian & Artinian modules and rings.
- Define the concept of linear transformation.

Paper II: Lebesgue Measure & Integration

The students will be able to

- Analyze measurable sets and Lebesgue measure.
- Understand concept of L^p and dual spaces.

Paper III: Topology II

The students will be able to

- Define properties of countability, compactness, separability, connectedness.
- To explore the ideas of net and filters and fundamental groups.

Paper IV Complex Analysis II

- Define analytic continuation, harmonic functions, canonical products
- Use of Schwartz reflection principle, Bloch Theorem. Little Picard theorem.

Paper V Differential and integral Equations- II

The students will be able to

- Define Fundamental Matrix for homogeneous and non homogeneous linear systems.
- Solve partial differential equations of first order by Lagrange's and Charpits methods.

Class - M. Sc (Mathematics) III**Paper I Functional analysis I**

The students will be able to

- Define Normed linear spaces, Banach space, Hilbert space and their basic properties.
- Define linear operators and linear functional and their properties.

Paper II : Advanced Graph Theory I

The students will be able to

- Define Graph, Isomorphism of graph, sub graph, walks, path, connected graph, Hamiltonian paths and circuits.
- Define trees, properties of trees, spanning trees, cut sets, planar graph.
- Find and understand applications of graph theory in daily life.

Paper III: Advanced Special Function I

The students will be able to

- Define Beta and Gamma Functions, and prove its various properties.
- Define Hypergeometric functions, and generalized form and proves various results based on it.

Paper IV: Operations Research I

- Understand scope of Operations Research and its characteristics.
- Understand the concept of Linear programming, feasible solution, obtain solution of linear programming problem using Simplex method, Big M method. Two phase method.

Paper V: Integral Transform I

The students will be able to

- To find Laplace transform of functions, find inverse Laplace transform, application of shifting theorems and convolution theorem.

- Apply Laplace transform to find solution of differential equations integral equations, wave equations, heat equations and in electrical circuits.

Class - M. Sc (Mathematics) IV

Paper I Functional analysis II

The students will be able to

- Understand the concepts of classical theorems such as Zorn's lemma , Hahn Banach theorem , Baire's category theorem .
- Define convergence of sequence of operators and functional, and their applications in proving results & theorems.

Paper II : Advanced Graph Theory II

The students will be able to

- Find matrix representations of graph, incidence matrix , adjacency matrix , cut set matrix .
- Define Chromatic numbers , Chromatic polynomials , Four colour problem, diagraphs and Binary Relation

Paper III: Advanced Special Function II

The students will be able to

- Understand the definition and properties of Bessel's function, Hermite polynomials, their generating functions, Rodrigues Formula.
- Define and use Laguerre polynomials and Jacobi polynomials to derive some result.

Paper IV: Operations Research II

The students will be able to

- Study Transportation problem and Assignment Problem and their applications.
- Find solution of non linear programming problem, construct network and perform critical path method and PERT calculations.

Paper V: Integral Transform II

The students will be able to

- To find Fourier transform and Fourier integral.
- Apply Fourier transform to boundary value problems, define Hankel transform and Mellin transforms.

(v) Department of Zoology

Program Specific Outcomes

- ❖ Developing deeper understanding of key concepts of biology at biochemical, molecular and cellular level, physiology and reproduction at organismal level, and ecological impact on animal behavior.
- ❖ Understand about biosystematics, taxonomy and evolution of fauna.
- ❖ Strengthening of genetics and cytogenetics principle in light of advancements in understanding human genome and genomes of other model organisms.
- ❖ Understood how the chemistry and structure of the major biological macromolecules, including proteins and nucleic acids, determines their biological properties.
- ❖ Individuals with aptitude and skill in research in different branches of Zoology as well as

related disciplines.

- ❖ Persons having innovative ideas and necessary training to initiate unique start-ups in the realm of life science.
- ❖ Development of an understanding of zoological science for its application in medical, entomology, apiculture, aquaculture, agriculture and modern medicine.

Course Outcomes

Class : M.Sc. I Sem

Paper I : Biosystematics, Taxonomy And Evolution

- Understanding of the universal common ancestor and tree of life, three domain concept of living kingdom
- Illustration of the molecular phylogeny, construction of phylogenetic trees using molecular data, construction of phylogenetic trees by using 16S rRNA gene sequences and concept of speciation in bacteria.
- Description of molecular divergence and molecular clocks and molecular drive, complication in inferring phylogenetic trees.
- Description of origin and diversification of bacteria and archaea; diversification of genomes, origin of genomes by horizontal gene transfer; role of plasmid, transposons, integrons and genomic islands in DNA transfer.
- Study of origin and diversification of eukaryotes, early fossilized cells, evolution of
- eukaryotic cell from prokaryotes- a case of symbiosis, evolution of eukaryotic genomes; gene duplication and divergence.
- Conceptualization of mode of speciation, evolution, systematics, biological classification, origination, extinction, and causes of differential rates of diversification.
- An insight to the overview of evolutionary biology, concept of organic evolution during pre- and post- Darwin era evolution and molecular biology- a new synthesis.
- A concept of – “from molecules to life”, life originated from RNA, introns as ancient component of genes

Paper II : Structure and Function of Invertebrates

- Understanding structure and function of different systems of invertebrates.
- Study of origin of metazoan, organization of coelom, locomotory organs and locomotion in different invertebrates.
- Understand the mechanism of digestion, excretion and respiration in metazoan, and other lower invertebrates.
- An insight to the overview of evolutionary significance of larval forms of trematoda, cestoda, crustacean, mollusca and echinodermata.
- Study the structure, affinities and life history of non coelomate and coelomate minor phyla

Paper III : Quantitative Biology, Biodiversity And Wildlife

- Studies descriptive statistics and applies in academic and research fields.
- Develops practical understanding of research methodology and applies in research (formulation and defining a research problem, different types of research design techniques involved).
- Get a deep knowledge about the basic types of biodiversity, biodiversity in India (features, structure and biodiversity of important Indian ecosystems).

- Become able to diagnose the causes of biodiversity depletion.
- Acquire theoretical expertise in strategies for the conservation of nature and biodiversity.
- Become well informed on international conventions & treaties for conservation of biodiversity

Paper IV : Biomolecules and Structural Biology

- Understand chemical foundation of biology i.e. pH, PK, acids, bases, buffers, acid soluble pool of living tissues.
- Study of basic concepts of metabolism, glycolysis and gluconeogenesis, citric acid cycle, oxidative phosphorylation.
- Get a deep knowledge about structure of protein. DNA, RNA, DNA replication, recombination and repair and membrane channels and pumps.
- Acquire theoretical knowledge of enzyme action, concepts of free energy and thermodynamic principles in biology

Class: M.Sc. II Sem

Paper I : General and Comparative Vertebrate Physiology and Endocrinology

- Description of internal transport and gas exchange, neural and chemical regulation of respiration,
- Perception of circulatory and respiratory responses to extreme conditions
- Understand the concept of Osmoregulation, Kidney functions and diversity, Extra-renal osmoregulatory organs, Patterns of nitrogen excretion.
- Concept of thermoregulation - Heat balance in animals, Adaptations to temperature extremes, torpor, Aestivation and hibernation.
- Description of sensing the environment- photoreception, chemoreception, mechano- reception, , chromatophores and bioluminescence.
- Description of phylogeny and ontogeny of endocrine glands.
- Understand the classification, chemical nature and mechanism of hormone action, and role of hormones and reproduction.

Paper II : Population Ecology and Environmental Physiology

- An overview of evolutionary ecology and environmental concepts and eco- physiological adaptations to fresh, marine and terrestrial environment.
- Understanding the characteristics of population and population dynamics.
- A study of life history pattern, fertility rate and age structure.
- Illustration of competition and coexistence, intra-specific and inter-specific interactions, scramble and contest competition model, mutualism and commensalism, prey-predator interactions.
- Description of nature of ecosystem, production, food webs, energy flow, environmental pollution and human health, resilience of ecosystem and ecosystem management.
- Understand the concept Meditation, yoga and their effects.

Paper III : Tools and Techniques in Biology

- Students know the computer added techniques, cryotechniques, separation techniques and microbiological techniques.
- Students learn about histological, cell culture, cytological, molecular cytological and surgical techniques etc.
- Acquires knowledge about radioactivity, radio-labelling methods.

- Learns the principles and acquires working knowledge of different laboratory equipments and techniques such as microscopes, centrifuges, colorimeter, flame photometer, Spectrophotometer, Electrophoresis, Chromatography.
- Studies basics of computer science achieve working knowledge on computers.

Paper IV : Molecular Cell Biology and Genetics

- Acquire detailed knowledge about membrane structure, membrane pumps and membrane transport.
- Develop thorough understanding on cell signalling.
- Students learn cell cycle and its regulation in detail.
- Learners acquire detailed information on chromatin structure, topology of nucleic acids, organization of the eukaryotic genome, DNA Replication, repair and recombination.
- Acquire detailed knowledge on transcription and RNA processing, translation-gene expression and gene regulation mechanisms.
- Acquires deep understanding of sex determination, cytogenetics of human chromosome, gene therapy, genetics disease and genomics.
- Learns about transgenic and knockout animals.

Class : M.Sc. III Sem

Paper I : Comparative Anatomy of Vertebrate

- Students able to understand the comparative anatomy of different systems of vertebrates
- i.e. digestive, respiratory, circulatory, nervous etc.
- Flight and aquatic adaptation in vertebrates.
- Origin, evolution general organization and affinities of Ostracoderms, Cyclostomes, Gnathostomes.
- Comparative account of lateral line system and electroreception.

Paper II : Limnology

- Detailed understanding of Limnology – Definition, historical development and scope of Limnology.
- Understanding of different types of freshwater habitats and their ecosystem.
- Developing skill in Morphometry – Use of various morphometric parameters and Zonation.
- Understand the importance of different physio-chemical characteristics of water.
- Study of Phytoplankton, Zooplankton and their inter-relationship and Aquatic insects, birds and their environmental significance.
- Aware regarding Causes of pollution of Aquatic Resources, their management and legislation, conservation, control, regulation.

Paper III: Eco- Toxicology

- Understand the general principles of Environmental Biology with emphasis on ecosystems, abiotic and biotic factors of ecosystems.
- Aware regarding use and misuse, alternatives of Agrochemical.
- A detailed understanding of basic concepts, Principles and various types of toxicological agents.
- Aware about Occupational Health Hazards and their Control.
- Understand the basic concepts and applications of remote sensing techniques in environmental conservation.
- Understand the cause and control methods of aquatic, radioactive, noise and vehicular pollution.

Paper IV : Aquaculture

- Learning aquaculture technology for fresh and marine fishes.
- Management of water quality requirements for aquaculture.
- Learn how to Set and manage a fresh water aquarium.
- A detailed learning of transportation of finfish and shellfish, eggs, fry, fingerlings and adults.
- Managing improvement in the Nutrition of aquatic animals by leaning feed types, manufacture and ingredients, anti- nutritional factors in fish feed ingredients.
- Understanding environmental impact of aquaculture, aquacultural wastes and future developments in waste minimization.
- Understand Common fish diseases & their control and biochemical composition and nutritional value of fish.

Class : M.Sc. IV Sem

Paper- I : Animal Behaviour and Neurophysiology

- An overview of animal behavior, orientation to primary and secondary orientation; kinesis – orthokinesis, klinokinesis; taxis – different kinds of taxis.
- Devising conservation strategies for different animal species. Learning and instincts: conditioning, habituation, sensitization, reasoning.
- Developing compassion towards other animals as well as other individuals, group selection, kin selection and inclusive fitness, cooperation, and alarm call.
- Evaluating other individuals of the society and taking decisions.
- Able to understand reproductive and social behaviour of different animal groups.

Paper II : Gamete Biology, Development and Differentiation in Vertebrates

- Information about history and basic concepts of developmental biology.
- Elucidation of biochemistry of semen and pre and post fertilization events
- Study biology of sex determination and sex differentiation a comparative account.
- Explanation of germ cell determinants and germ cell migration, embryonic stem cells their applications and stem cell disorders.
- Understand hormonal regulation of ovulation, pregnancy, parturition and lactation.
- Study of multiple ovulation and embryo transfer technology.
- Gather information about teratological effects of xenobiotics on gametes

Paper III A(Optional): Ichthyology (Fish) Structure and Function

- This will provide a thorough coverage of origin, evolution and classification of fishes.
- Gather information about fish integument, locomotion, air bladder and Weberian ossicles.
- Understand the phenomenon of excretion, osmoregulation, and reproduction.
- Study various adaptation in fishes according to their habit and habitat.
- Information about Parental care and poisonous and venomous fishes.
- Biochemical composition and economic importance of fishes, Fish spoilage & preservation methods

Paper III B (Optional): Wild Life Conservation and IV B Environment and Biodiversity Conservation

- Student able to Identify different wild animals their habit and habitats.

- Get knowledge of endangered species.
- Study of local birds and their habit habitats
- Understand the functioning of different ecosystem
- Gather information about local Biodiversity.
- Distribution of wild life India.(National parks and sanctuaries)
- Soil and Water Analysis.
- Understand the Interspecific relationship of Naturalism, Symbiosis, Mutualism , Commensalism, Parasitism, Predation Competition.

Practical Outcomes

- Understand animal behavior by Taxes, Reflexes, Biological clock, and social behavior.
- Understand the process developmental of chick and frog.
- Students will learn how to expose various systems of different fishes i.e. Walago, Mystus, Labeo, Torpedo by dissection.
- Students able to determine age of fishes with the help of scales.
- Attained knowledge on the observation of preserved specimens of fresh water and marine fishes and understand histology of different organs through different histological slides.
- Skilled in preparation of temporary as well as permanent mount of fish scales, ampullae of Lorenzini, otolith, striated muscles and cartilage etc.
- Identify the fresh water fishes upto species level.

Practical Outcomes

- Students become familiar with specimens of various phyla.
- Understand various systems of invertebrates – Squilla, Prawn, Sepia, Loligo by major and minor dissection.
- Identification of Spots related with Adaptation. Homologics , Analogics and modification of mouth parts.
- Students skilled in preparation of Permanent mounting.
- Get knowledge of Biodiversity and wild life. (Mammals and Fishers group).
- Do Exercise on mean, mode & Median.
- Preparation of slides on Meiosis & Mitosis and different types of Chromosomes.
- Skilled in experiments on haematology, enzymology and chromatography.
- Students able to detect the presence of protein carbohydrate, fats and Nitrogenous products in given samples.
- Acquires working knowledge of different laboratory equipments and techniques such as microscopes, centrifuges, colorimeter, Spectrophotometer, Electrophoresis, Chromatography.
- Estimation the techniques based for RNA and DNA and Demonstration of chromosome polymorphism.

Certificate Courses

Paper :Medicinal Plants

Course Outcomes

After Studying this course, the students will be able to understand:

- Importance of balanced diet to reduce risk of deficiency diseases.
- The utility of plants as medicines.
- The preparation of basic herbal medicinal products.
- The idea of cultivation practices.
- The storage, packaging and marketing of herbal medicines.
- To work with individual plant and plant products

Paper : Data Analysis & Visualization through Spreadsheet Course Outcomes

On the completion of this course, students will be able-

- Prepare a spreadsheet file and enter data into the sheet.
- Illustrate formatting and editing capabilities on the data.
- Demonstrate basic calculations and save data.
- Import and export data into the spreadsheet.
- Demonstrate basic visualizing, analyzing, organizing and sharing techniques

Paper : Web Designing

On the completion of this course, students will be able-

- Code a handful of useful HTML & CSS examples
- Build semantic, HTML & CSS webpage
- Write basic scripts
- Use Names, Objects and Methods
- Add interactivity to a Web page.
- Create Dynamic Web pages using Java Script in HTML forms.

Paper : Indian Polity

- This paper help the aspirants of competitive exams like UPSC/PCS/SSC/CDS and other.
- Introducing the Indian Constitution with a focus on the role of the Constituent Assembly and examining the essence of the Preamble.
- Examining the Fundamental Rights and Duties of Indian citizens with a study of the significance and status of Directive Principles.
- Assessing the nature of Indian Federalism with focus on Union-State Relations.
- Critically analyzing the important institutions of the Indian Union: the Executive: President; Prime Minister, Council of Ministers; Governor, Chief Minister and Council of Ministers; The legislature: Rajya Sabha, Lok Sabha, Speaker, Committee System, State Legislature.

Paper : Human Values and Professional Ethics

On the completion of this course,

- Students will be able to understand and associates the holistic perception of harmony at all levels of existence.
- They are able to evaluate co-existence of the "I" with the body.
- To learn to respect others and develop civic virtue.
- To instill moral & social values and loyalty.
- The program creates an awareness amongst students about ethics and human values.
