ABOUT THE CONFERENCE

The main objective of this conference is to highlight the changes caused by COVID and how they might affect the scope, innovation, research, therapeutic and entrepreneurship activities in years to come. The main goal of this conference is to introduce the current progress in comprehending the working of immune system in combating bacterial and viral infection and this will help students to understand the future scope of Biological Sciences.
 (Fighting the virus together require cooperation on three things- Research, Knowledge and Warning of future outbreaks)
 COVID's effects have been extensive, and it would be hard to discuss them in detail in a single conference, it is even harder to predict its long-term consequences, these consequences are also likely to vary from one country to another, thus in this conference we will try to focus on key trends especially scope, innovation, research, therapeutic and entrepreneurship activities towards Biological Sciences.
